*Digital Labor* Trebor Scholz, 2013 Digital Labor asks whether life on the Internet is mostly work or play We tweet we tag photos we link we review books we comment on blogs we remix media and we upload video to create much of the content that makes up the web *Capitalism, Citizenship and the Arts of Thinking* Kathryn Dean, 2014-03-26 Capitalism Citizenship

and the Arts of Thinking proposes a historical materialist ethic of human flourishing understood in terms of the practice of citizenship. It focuses on the ways in which capitalism's necessary mode of thinking, analytical thinking, impedes the nurturing of capabilities for citizenship as understood from a Marxian Aristotelian point of view. It includes a systematic discussion of the Aristotelian resonances in Marx's critique of capitalism as well as an elaboration and critique of Alfred Sohn-Rethel's account of the origins of analytical thinking in his book *Intellectual and Manual Labor: A Critique of Epistemology*. Dean's critique of this book draws on the language theories of Lev Vygotsky, Alexander Luria, Jack Goody, Eric Havelock, and Walter Ong so as to identify the origins of analytical thinking in literacy rather than in monetised exchange relations as claimed by Sohn-Rethel. Having traced the development of analytical thinking so as to bring out the ways in which this thinking was a condition of possibility for the division of head and hand in nineteenth-century England, Dean brings the analysis into the contemporary world by examining the changes effected by digitalised communication in terms of citizenship capabilities now drawing on the work of Michael Hardt and Antonio Negri in order to do so. The book's ground-breaking content is in the fusion of Marxian Aristotelian and linguistic elements to develop a critique of capitalism's hegemonic mode of thinking, analytical thinking, as manifested in the modern sciences and to show how the draining of intelligibility from the everyday world permitted by this thinking becomes an obstacle to the practice of meaningful citizenship. Its main appeal will be to Marxist thinkers whose main concern is with the alienating as opposed to exploitative character of capitalist modes of life. It is written to complement the work of such Marxists, these being in the main writers such as Michael Hardt and Antonio Negri, and is pitched at researchers in the field. It could be used on post-graduate courses in political theory as well as social and cultural theory.

*The Oxford Handbook of Information and Communication Technologies* Robin Mansell, 2007. The production and consumption of information and communication technologies or ICTs are becoming deeply embedded within our societies. The influence and implications of this have an impact at a macro level in the way our governments, economies, and businesses operate and at a micro level in our everyday lives. This handbook is about the many challenges presented by ICTs. It sets out an intellectual agenda that examines the implications of ICTs for individuals, organizations, democracy, and the economy. Explicitly interdisciplinary and combining empirical research with theoretical work, it is organised around four themes covering the knowledge economy, organizational dynamics, strategy and design, governance, and democracy, and culture, community, and new media literacies. It provides a comprehensive resource for those working in the social sciences and in the physical sciences and engineering fields with leading contemporary research informed principally by the disciplines of anthropology, economics, philosophy, politics, and sociology.

*The Digital Transformation of Labor* Anthony Larsson, Robin Teigland, 2019-11-11. Through a series of studies, the overarching aim of this book is to investigate if and how the digitalization/digital transformation process causes or may cause the autonomy of various labor functions and its impact in creating or stymieing various job opportunities on the labor market. This book also seeks to illuminate what actors/groups

are mostly benefited by the digitalization digital transformation and which actors groups that are put at risk by it This book takes its point of departure from a 2016 OECD report that contends that the impact digitalization has on the future of labor is ambiguous as on the one hand it is suggested that technological change is labor saving but on the other hand it is suggested that digital technologies have not created new jobs on a scale that it replaces old jobs Another 2018 OECD report indicated that digitalization and automation as such does not pose a real risk of destroying any significant number of jobs for the foreseeable future although tasks would by and large change significantly This would affects welfare as most of its revenue stems from taxation and particularly so from the taxation on labor directly or indirectly For this reason this book will set out to explore how the future technological and societal advancements impact labor conditions The book seeks to provide an innovative enriching and controversial take on how various aspects of the labor market can be and are affected the ongoing digitalization trend in a way that is not covered by extant literature As such this book intends to cater to a wider readership from a general audience and students to specialized professionals and academics wanting to gain a deeper understanding of the possible future developments of the labor market in light of an accelerating digitalization digital transformation of society at large

This book delves into this intricate context exploring Indian markets through the competition and collaboration of those who frame and participate in markets.
