Reuben, 1996-09-15 Based on extensive research at eight universities: Harvard, Yale, Columbia, Johns Hopkins, Chicago, Stanford, Michigan, and California at Berkeley, Reuben examines the aims of university reformers in the context of nineteenth-century ideas about truth. Medicine at Michigan Joel D. Howell, Dea Boster, 2017-09-07 A trailblazer in American medical education since 1850, the Medical School at the University of Michigan was the first program in the United States to own and operate its own hospital and the earliest major medical school to admit women. In the late nineteenth century, the School emerged as a frontrunner in modern scientific medical education in the United States and one of the first in the nation to implement both required clinical clerkships and laboratory science as part of their curriculum, including the first full laboratory course in bacteriology. Decades later, the Medical School remained at the vanguard of medical education by increasing its focus on research, and these efforts resulted in world-changing breakthroughs such as field testing the first safe polio vaccine, proposing a genetic mechanism for sickle cell anemia, inventing the fiber optic endoscope, and cloning the gene responsible for cystic fibrosis. The Medical School's history is not without its growing pains; alongside top-tier education and incredible innovation came times of stress with the broader University and Ann Arbor communities' complex expectations and realities for student diversity and many controversies over curriculum and methodology. *Medicine at Michigan* explores how the School has dealt with changes in medical science, practice, and social climates over the past 150 years and illuminates the complicated interactions between economic, social, and cultural trends and medical education at the University of Michigan and across the nation. This book will appeal to readers interested in the history of medicine as well as current and former medical faculty, members, students, and employees of the University of Michigan Medical School

A New Moral Vision Andrea L. Turpin, 2016-08-25 In *A New Moral Vision*, Andrea L. Turpin explores how the entrance of women into U.S. colleges

and universities shaped changing ideas about the moral and religious purposes of higher education in unexpected ways and in turn profoundly shaped American culture In the decades before the Civil War evangelical Protestantism provided the main impetus for opening the highest levels of American education to women Between the Civil War and World War I however shifting theological beliefs a growing cultural pluralism and a new emphasis on university research led educators to reevaluate how colleges should inculcate an ethical outlook in students just as the proportion of female collegians swelled In this environment Turpin argues educational leaders articulated a new moral vision for their institutions by positioning them within the new landscape of competing men s women s and coeducational colleges and universities In place of fostering evangelical conversion religiously liberal educators sought to foster in students a surprisingly more gendered ideal of character and service than had earlier evangelical educators Because of this moral reorientation the widespread entrance of women into higher education did not shift the social order in as egalitarian a direction as we might expect Instead college graduates who formed a disproportionate number of the leaders and reformers of the Progressive Era contributed to the creation of separate male and female cultures within Progressive Era public life and beyond Drawing on extensive archival research at ten trend setting men s women s and coeducational colleges and universities A New Moral Vision illuminates the historical intersection of gender ideals religious beliefs educational theories and social change in ways that offer insight into the nature and cultural consequences of the moral messages communicated by institutions of higher education today
