**Lean Transportation Management**  
Mohamed Achahchah,2018-09-17 This book provides an overview of the key transportation management processes from a shipper s perspective It enables managers to gain quick insight in the added value of transportation as a strategic differentiator its key drivers and guidelines on how to use them in an effective and efficient decision making process It explains how to identify and eliminate waste using basic Lean tools and proven concepts The reader is guided on how to start implementing the Lean methodology and best practices in the industry to realize significant savings Companies such as Adidas and Amazon are using transportation to increase sales by delivering purchased products faster than the competition These companies do not treat transportation as a cost center They are not focusing on reducing transportation spending They allow customers to buy any product that is available in any store or warehouse and have it delivered to their homes By delivering faster than the competition they increase sales At the same time they lower their total supply chain costs as faster deliveries lead to fewer returns Reduction of returns means higher sales and lower transportation costs for returns The result is higher profits while creating more value for the customer Transportation is moving from a cost center towards a profit center The traditional logistics service providers are perceived to not innovate fast enough Top management must understand the transportation management basics and use it in their strategic decision making They should be involved in discussions on how to organize the transport management function in the best way and how to use it as a service differentiator Transportation is more than the efficient movement of supplies sub assemblies and final products In addition it is more than the key performance indicators on the business balanced scorecard Transportation management professionals fail to catch top management s attention due to the use of technical language It is more difficult to understand transportation key performance indicators such as loading degree net and gross pick up and delivery reliability It is easier to get top management attention when talking about lost sales due to stock outs lost tenders due to long delivery times high inventory holding and scrap costs

Job Shop Lean Shahrukh A. Irani, 2020-05-04

In the 1950s, the design and implementation of the Toyota Production System (TPS) within Toyota had begun. In the 1960s, Group Technology (GT) and Cellular Manufacturing (CM) were used by Serck Audco Valves, a high mix, low volume HMLV manufacturer in the United Kingdom, to guide enterprise-wide transformation. In 1996, the publication of the book *Lean Thinking* introduced the entire world to Lean. Job Shop Lean integrates Lean with GT and CM by using the five Principles of Lean to guide its implementation: 1. identify value, 2. map the value stream, 3. create flow, 4. establish pull, and 5. seek perfection. Unfortunately, the tools typically used to implement the Principles of Lean are incapable of solving the three Industrial Engineering problems that HMLV manufacturers face when implementing Lean: 1. finding the product families in a product mix with hundreds of different products, 2. designing a flexible factory layout that fits hundreds of different product routings, and 3. scheduling a multi-product, multi-machine production system subject to finite capacity constraints. Based on the author's 20 years of learning, teaching, researching, and implementing Job Shop Lean since 1999, this book describes the concepts, tools, software, implementation methodology, and barriers to successful implementation of Lean in HMLV production systems. Utilizes Production Flow Analysis instead of Value Stream Mapping to eliminate waste in different levels of any HMLV manufacturing enterprise. Solves the three Industrial Engineering problems that were mentioned earlier using software like PFAST, Production Flow Analysis, and Simplification Toolkit (Sgetti and Schedlyzer). Explains how the one-at-a-time implementation of manufacturing cells constitutes a long-term strategy for Continuous Improvement. Explains how product families and manufacturing cells are the basis for implementing flexible automation, machine monitoring, virtual cells, Manufacturing Execution Systems, and other elements of Industry 4.0. Teaches a new method, Value Network Mapping, to visualize large, multi-product, multi-machine production systems whose Value Streams share many processes. Includes real success stories of Job Shop Lean implementation in a variety of production systems, such as a forge shop, a machine shop, a fabrication facility, and a shipping department. Encourages any HMLV manufacturer planning to implement Job Shop Lean to leverage the co-curricular and
