Making Medicines Affordable:

Making Medicines Affordable National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Ensuring Patient Access to Affordable Drug Therapies, 2018-04-01

Thanks to remarkable advances in modern health care attributable to science engineering and medicine it is now possible to cure or manage illnesses that were long deemed untreatable At the same time however the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care Total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance The use of increasingly expensive prescription drugs is a significant part of this problem making the cost of biopharmaceuticals a serious national concern with broad political implications Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years finding a way to make prescription medicines and health care at large more affordable for everyone has become a socioeconomic imperative Affordability is a complex function of factors including not just the prices of the drugs themselves but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts Therefore any solution to the affordability issue will require considering all of these factors together The current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole Making Medicines Affordable examines patient access to affordable and effective therapies with emphasis on drug pricing inflation in the cost of drugs and insurance design This report explores structural and policy factors influencing drug pricing drug access programs the emerging role of comparative effectiveness assessments in payment policies changing finances of medical practice with regard to drug costs and reimbursement and measures to prevent drug shortages and foster continued innovation in drug development It makes recommendations for policy actions that could address drug price trends improve patient access to affordable and effective treatments and encourage innovations that address significant needs in health care

[Prescription for the People](#) Fran Quigley, 2017-11-15 In Prescription for the People Fran Quigley diagnoses our inability to get medicines to the people who need them and then

prescribes the cure He delivers a clear and convincing argument for a complete shift in the global and U S approach to developing and providing essential medicines and a primer on how to make that change happen Globally 10 million people die each year because they are unable to pay for medicines that would save them The cost of prescription drugs is bankrupting families and putting a strain on state and federal budgets Patients desperate need for affordable medicines clashes with the core business model of the powerful pharmaceutical industry which maximizes profits whenever possible It doesn t have to be this way Patients and activists are aiming to make all essential medicines affordable by reclaiming medicines as a public good and a human right instead of a profit making commodity In this book Quigley demystifies statistics and terminology offers solutions to the problems that block universal access to medicines and provides a road map for activists wanting to make those solutions a reality Rethinking Medications Jerry Avorn,2025-04-22 A leading medical expert explains why too many of the medications Americans take are poorly evaluated overpriced or pose unwarranted risks and what we can do to fix that Groundbreaking research has given us many remarkable new medicines but America s drug evaluation process once the envy of the world is being seriously compromised Under pressure from drugmakers the FDA has been lowering its approval standards and has let poorly effective or risky products enter the market while our prescription prices the highest in the world put crucial treatments beyond the reach of many In Rethinking Medications Dr Jerry Avorn explains how we got here and what we can do to ensure that our medicines are dependably effective safe and affordable Part of the problem is the power of pharma s biggest in Washington lobbying clout which influences members of Congress from both parties That leverage is extended by the FDA s growing dependence on fees the industry pays to get its drugs approved The increasingly revenue driven US healthcare system shapes the way doctors prescribe medications sometimes to the detriment of their clinical decisions Based on his decades of practice and research at Harvard Medical School and his role at the very center of many of these controversies Dr Avorn presents compelling clinical illustrations of these issues across the medical spectrum from cancer drugs to opioids from treatments for rare diseases to psychedelics Throughout he offers practical steps that consumers policymakers and practitioners can take to address these problems at a moment when our assumptions about scientific evidence regulation pricing and the role of government are being contested as never before

Pharmaceutical Ethics and Health Care Access Richard George Boudreau, 2021-05-07 A fragmented health care industry combined with longer life expectancies is helping to push up the price of prescription drugs While pharmaceutical manufacturers point to increased costs of research and development for higher prices the truth is that big pharma and its allies operate in an environment of secrecy with no rhyme or reason when it comes to charges Richard George Boudreau explores why we find ourselves in such a predicament in this book He raises several ethical concerns chief among them being how much should actually be charged for drugs and whether the industry itself is behaving ethically The author tackles questions such as Who are the industry players and what role have each played in the crisis How can we begin to solve the problem of high pharmaceutical costs How are overpriced drugs affecting vulnerable populations and society at large Solving the problem of high pharmaceutical costs won t be easy but if stakeholders get together and do their part it can be done Health care providers who write prescriptions for drugs as well as

the patients who take those drugs however must play a major role in ensuring prices remain affordable *Brand Planning for the Pharmaceutical Industry* Janice MacLennan, 2004 *Brand Planning for the Pharmaceutical Industry* is a step by step guide with examples from the pharmaceutical industry directly applicable to your own brand planning It begins by exploring the definition of branding and why it is of importance particularly to the pharmaceutical sector It shows how branding can be successfully integrated into the early stages of the commercialization process for new products both in theory and in practice

Survival of the City Edward Glaeser, David Cutler, 2021-09-07 Expansive and entertaining A fast paced and highly readable journey the book serves as a useful tool in the effort to redefine the role of the city in an age of increasingly polarized politics and reminds us that urban health is as Fiorello La Guardia once remarked about cleaning the streets not a Democratic or Republican issue New York Times Book Review One of our great urbanists and one of our great public health experts join forces to reckon with how cities are changing in the face of existential threats the pandemic has only accelerated Cities can make us sick That's always been true diseases spread more easily when more people are close to one another And cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on But cities have flourished nonetheless because they are humanity's greatest invention indispensable engines for creativity innovation wealth and civilization itself But cities now stand at a crossroads During the global COVID crisis cities grew silent the normal forms of socializing ground to a halt How permanent are these changes Advances in technology mean that many people can opt out of city life as never before Will they Are we on the brink of a post urban world City life will survive but individual cities face terrible risks argue Edward Glaeser and David Cutler and a wave of urban failure would be absolutely disastrous In terms of intimacy and inspiration nothing can replace what cities offer But great cities have always demanded great management and our current crisis has exposed fearful gaps in our capacity for good governance In America Glaeser and Cutler argue deep inequities in health care and education are a particular blight on the future of our cities solving them will be the difference between our collective good health and a downward spiral to a much darker place
