Philosophy and Technology II Carl Mitcham, Alois Hünig, 1986-03-31 Until recently the philosophy and history of science proceeded in a separate way from the philosophy and history of technology and indeed with respect to both science and technology philosophical and historical inquiries were also following their separate ways Now we see in the past quarter century how the philosophy of science has been profoundly influenced by historical studies of the sciences and no longer concerned so single mindedly with the analysis of theory and explanation with the relation between hypotheses and experimental observation Now also we see the traditional historical studies of technology supplemented by philosophical questions and no longer so plainly focussed upon contexts of application on invention and practical engineering and on the mutually stimulating relations between technology and society Further alas the neat division of intellectual labor those clearly drawn distinctions between science and technology between the theoretical and the applied between discovery and justification between internalist and externalist approaches all have become muddled Partly this is due to internal revolutions within the philosophy and history of science the first result being recognition of their mutual relevance Partly however this state of muddle is due to external factors science at the least in the last half century has become so intimately connected with technology and technological developments have created so many new fields of scientific and philosophical inquiry that any critical reflection on scientific and technological endeavors must henceforth take their interaction into account

Parallels and Responses to Curricular Innovation Brad Petitfils, 2014-10-24 This volume explores two radical shifts in history and subsequent responses in curricular spaces the move from oral to print culture during the transition between the 15th and 16th centuries and the rise of the Jesuits and the move from print to digital culture during the transition between the 20th and 21st centuries and the rise of what the philosopher Jean Baudrillard called hyperreality The curricular innovation that accompanied the first shift is considered through the rise of the Society of Jesus the Jesuits These men created the first global network of education and developed a humanistic curriculum designed to help students navigate a complicated era of the known human centered and unknown God centered universe The curricular innovation that is proposed for the current shift is guided by the question What should be the role of undergraduate education become in the 21st century Today the tension between the known and unknown universe is concentrated on the interrelationships between our embodied spaces and our digitally mediated ones As a result today's undergraduate students should be challenged to understand how in the objectively focused commodified STEM centric landscape of higher education the human subject is

decentered by the forces of hyperreality and in turn how the human subject might be recentered to balance our humanness with the new realities of digital living Therein one finds the possibility of posthumanistic education

Strategic Information Management Robert D. Galliers, Dorothy E Leidner, 2013-06-17 Strategic Information Management has been completely updated to reflect the rapid changes in IT and the business environment since the publication of the second edition Half of the readings in the book have been replaced to address current issues and the latest thinking in Information Management It goes without saying that Information technology has had a major impact on individuals organizations and society over the past 50 years or so There are few organizations that can afford to ignore IT and few individuals who would prefer to be without it As managerial tasks become more complex so the nature of the required information systems IS changes from structured routine support to ad hoc unstructured complex enquiries at the highest levels of management As with the first and second editions this third edition of Strategic Information Management Challenges and strategies in managing information systems

aims to present the many complex and inter related issues associated with the management of information systems The book provides a rich source of material reflecting recent thinking on the key issues facing executives in information systems management It draws from a wide range of contemporary articles written by leading experts from North America and Europe Strategic Information Management is designed as a course text for MBA Master s level students and senior undergraduate students taking courses in information management It provides a wealth of information and references for researchers in addition Microcomputer Systems Mehdi Khosrow-Pour,1990 Textbook for undergraduate and graduate level students Addresses the overall role of microcomputers and their capabilities Annotation copyrighted by Book News Inc Portland OR
