Bacon's plans for educational and ecclesiastical reform through the study of arts and sciences which Bacon saw as having been neglected in the curricula of the major European universities. In writing the *Opus maius* Bacon wanted to demonstrate that not only were the sciences a solid foundation for learning theology but they could also improve society and help mankind attain salvation. This volume contains nine essays on the sciences Bacon thought were most important in this scheme including optics, mathematics, astronomy, alchemy, medicine, and experimental science. Each provides a focused examination of the individual sciences demonstrating how Bacon understood and practised them as well as how he envisioned they would fit together into his larger programme of scientific reform. This thought-provoking collection will be a valuable resource to historians of science, medicine, and philosophy as well as those in medieval and premodern studies.
