Bone and Connective Tissue Markers Bozzano G Luisa, 2012-12-02 For many years biochemical tests have been widely used for the diagnosis classification and monitoring of bone and connective tissue disease. However, shortcomings in terms of the specificity and sensitivity of such tests have prompted continual questioning about their clinical usefulness. This book, based on a meeting organized jointly by the University of Uppsala and Pharmacia Diagnostics AB, reviews our current understanding of basic bone and connective tissue biochemistry and the clinical role of biochemical markers specific to related diseases with special reference to rheumatoid arthritis and osteoporosis.

MicroRNA Methods John J. Rossi, 2007-08-30 MicroRNAs (miRNA) are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology. Upon their discovery, researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA (mRNA) by literally cutting it in half, interfering with the normal function of specific messenger RNAs in gene expression. This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver, lung, or brain cell, for example. Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields. This volume in *Methods in Enzymology* presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets, MicroRNA expression, maturation, and functional analysis, and MicroRNAs and disease.

Biochemistry David Metzler, 2012-12-02 *Biochemistry: The Chemical Reactions of Living Cells* is a 16-chapter reference source on chemical structures and reactions of living cells. The first three chapters of this book contain introductory material on cell structure, molecular architecture, and energetics. The subsequent chapters examine the allosteric effect of the binding structures of oligomeric enzymes, microtubules, viruses, and muscle. These chapters also describe the structures and chemical properties of membranes and of the surrounding cell coats. The discussions then shift to the general properties of enzymes, the kinetics of chemical reactions, and the various mechanisms employed in enzymatic catalysis. Considerable chapters are devoted to the reaction sequences found in metabolism. These chapters particularly examine the carbohydrate and lipid metabolism, photosynthesis, and biosynthesis, and catabolism of an enormous number of nitrogenous compounds. The final chapters highlight the genetic and hormonal control of metabolism, development, and brain function. *Biochemistry* teachers and students will find this book of great value.
