Methods of Gas Analysis (Classic Reprint) Walther Hempel, 2015-07-04 Excerpt from *Methods of Gas Analysis*. In publishing my *New Methods for the Analysis of Gases* it was not my intention to write a manual of gas analysis but merely to describe my own researches and the construction of apparatus. My present plan, however, after ten years' experience and the most varied work with gases and their analysis, is to describe all of the operations which are involved in the analysis of gases with my apparatus. I have thought to give the book especial value by limiting myself to the description of those methods which in my opinion are at the present time the most practical. I have not endeavoured to give a complete description of all known methods because the book would then become too bulky to be used as the laboratory guide which it is intended to be. The apparatus devised by Pettersson has been described because a wholly new principle in the measurement of gases is there brought into use. In the following pages I hope to give a guide to gas analysis by the help of which the various examinations, even the most difficult, can be carried out.
