Metric Spaces Of Nonpositive Curvature:

Metric Spaces of Non-Positive Curvature Martin R. Bridson, André Häfliger, 2011-10-20 A description of the global properties of simply connected spaces that are non positively curved in the sense of A D Alexandrov and the structure of groups which act on such spaces by isometries The theory of these objects is developed in a manner accessible to anyone familiar with the rudiments of topology and group theory non trivial theorems are proved by concatenating elementary geometric arguments and many examples are given Part I provides an introduction to the geometry of geodesic spaces while Part II develops the basic theory of spaces with upper curvature bounds More specialized topics such as complexes of groups are covered in Part III Metric Spaces, Convexity and Nonpositive Curvature Athanase Papadopoulos, 2005

Nonpositive Curvature: Geometric and Analytic Aspects Jürgen Jost, 2012-12-06 The present book contains the lecture notes from a Nachdiplomvorlesung a topics course addressed to Ph D students at the ETH ZUrich during the winter term 95 96 Consequently these notes are arranged according to the requirements of organizing the material for oral exposition and the level of difficulty and the exposition were adjusted to the audience in Zurich The aim of the course was to introduce some geometric and analytic concepts that have been found useful in advancing our understanding of spaces of nonpositive curvature In particular in recent years it has been realized that often it is useful for a systematic understanding not to restrict the attention to Riemannian manifolds only but to consider more general classes of metric spaces of generalized nonpositive curvature The basic idea is to isolate a property that on one hand can be formulated solely in terms of the distance function and on the other hand is characteristic of nonpositive sectional curvature on a Riemannian manifold and then to take this property as an axiom for defining a metric space of nonpositive curvature Such constructions have been put forward by Wald Alexandrov Busemann and others and they will be systematically explored in Chapter 2 Our focus and treatment will often be different from the existing literature In the first Chapter we consider several classes of examples of Riemannian manifolds of nonpositive curvature and we explain how conditions about nonpositivity or negativity of curvature can be exploited in various geometric contexts **Lectures on Spaces of Nonpositive Curvature** Werner

Ballmann, 2012-12-06 Singular spaces with upper curvature bounds and in particular spaces of nonpositive curvature have been of interest in many fields including geometric and combinatorial group theory topology dynamical systems and probability theory In the first two chapters of the book a concise introduction into these spaces is given culminating in the Hadamard Cartan theorem and the discussion of the ideal boundary at infinity for simply connected complete spaces of nonpositive curvature In the third chapter qualitative properties of the geodesic flow on geodesically complete spaces of nonpositive curvature are discussed as are random walks on groups of isometries of nonpositively curved spaces The main class of spaces considered should be precisely complementary to symmetric spaces of higher rank and Euclidean buildings of dimension at least two Rank Rigidity conjecture In the smooth case this is known and is the content of the Rank Rigidity

theorem An updated version of the proof of the latter theorem in the smooth case is presented in Chapter IV of the book This chapter contains also a short introduction into the geometry of the unit tangent bundle of a Riemannian manifold and the basic facts about the geodesic flow In an appendix by Misha Brin a self contained and short proof of the ergodicity of the geodesic flow of a compact Riemannian manifold of negative curvature is given The proof is elementary and should be accessible to the non specialist Some of the essential features and problems of the ergodic theory of smooth dynamical systems are discussed and the appendix can serve as an introduction into this theory Metric Spaces, Convexity and Nonpositive Curvature: Second Edition ,2014 High-dimensional Manifold Topology R. T. Farrell,F. Thomas Farrell,Wolfgang Luck,2003 This book covers topics such as manifolds with positive scalar curvature pseudo isotopy spectrum and controlled theory and reduction of the Novikov and Borel conjectures for aspherical complexes to aspherical manifolds *Heat Kernels and Analysis on Manifolds, Graphs, and Metric Spaces* Pascal Auscher,T. Coulhon,2003 This volume contains the expanded lecture notes of courses taught at the Emile Borel Centre of the Henri Poincare Institute Paris In the book leading experts introduce recent research in their fields The unifying theme is the study of heat kernels in various situations using related geometric and analytic tools Topics include analysis of complex coefficient elliptic operators diffusions on fractals and on infinite dimensional groups heat kernel and isoperimetry on Riemannian manifolds heat kernels and infinite dimensional analysis diffusions and Sobolev type spaces on metric spaces quasi regular mappings and p Laplace operators heat kernel and spherical inversion on $SL(2, \mathbb{C})$ random walks and spectral geometry on crystal lattices isoperimetric and isocapacitary inequalities and generating function techniques for random walks on graphs This volume is suitable for graduate students and research mathematicians interested in random processes and analysis on manifolds *Probability Measures on Metric Spaces of Nonpositive Curvature* Karl-Theodor Sturm,2003 **Convex Analysis and Optimization in Hadamard Spaces** Miroslav Bacak,2014-10-29 In the past two decades convex analysis and optimization have been developed in Hadamard spaces This book represents a first attempt to give a systematic account on the subject Hadamard spaces are complete geodesic spaces of nonpositive curvature They include Hilbert spaces Hadamard manifolds Euclidean buildings and many other important spaces While the role of Hadamard spaces in geometry and geometric group theory has been studied for a long time first analytical results appeared as late as in the 1990s Remarkably it turns out that Hadamard spaces are appropriate for the theory of convex sets and convex functions outside of linear spaces Since convexity underpins a large number of results in the geometry of Hadamard spaces we believe that its systematic study is of substantial interest Optimization methods then address various computational issues and provide us with approximation algorithms which may be useful in sciences and engineering We present a detailed description of such an application to computational phylogenetics The book is primarily aimed at both graduate students and researchers in analysis and optimization but it is accessible to advanced undergraduate students as well **Nonlinear partial differential equations in differential**

geometry Robert Hardt, 1996 The lecture notes from a July 1992 minicourse in Park City Utah for graduate students and research mathematicians in differential geometry and partial differential equations They survey the current state of such aspects as the Moser-Trudinger inequality and its applications to some problems in conformal geometry the effect of curvature on the behavior of harmonic functions and mapping and singularities of geometric variational problems No index Annotation copyright by Book News Inc Portland OR Interacting Stochastic Systems Jean-Dominique Deuschel, Andreas Greven, 2005-12-05 Core papers emanating from the research network DFG Schwerpunkt Interacting stochastic systems of high complexity **Weakly Modular Graphs and Nonpositive Curvature** Jérémie Chalopin, Victor Chepoi, Hiroshi Hirai, Damian Osajda, 2021-06-18 This article investigates structural geometrical and topological characterizations and properties of weakly modular graphs and of cell complexes derived from them The unifying themes of our investigation are various nonpositive curvature and local to global properties and characterizations of weakly modular graphs and their subclasses Weakly modular graphs have been introduced as a far reaching common generalization of median graphs and more generally of modular and orientable modular graphs Helly graphs bridged graphs and dual polar graphs occurring under different disguises 1 skeletons collinearity graphs covering graphs domains etc in several seemingly unrelated fields of mathematics Metric graph theory Geometric group theory Incidence geometries and buildings Theoretical computer science and combinatorial optimization We give a local to global characterization of weakly modular graphs and their subclasses in terms of simple connectedness of associated triangle square complexes and specific local combinatorial conditions In particular we revisit characterizations of dual polar graphs by Cameron and by Brouwer-Cohen We also show that disk Helly graphs are precisely the clique Helly graphs with simply connected clique complexes With 11 embeddable weakly modular and weakly modular graphs we associate high dimensional cell complexes having several strong topological and geometrical properties contractibility and the CAT 0 property Their cells have a specific structure they are basis polyhedra of even matroids in the first case and orthoscheme complexes of gated dual polar subgraphs in the second case We resolve some open problems concerning subclasses of weakly modular graphs we prove a Brady-McCammond conjecture about CAT 0 metric on the orthoscheme **The Mathematical Legacy of Victor Lomonosov** Richard M. Aron, Eva A. Gallardo Gutiérrez, Miguel Martín, Dmitry Ryabogin, Ilya M. Spitkovsky, Artem Zvavitch, 2020-08-10 The fundamental contributions made by the late Victor Lomonosov in several areas of analysis are revisited in this book in particular by presenting new results and future directions from world recognized specialists in the field The invariant subspace problem Burnside's theorem and the Bishop-Phelps theorem are discussed in detail This volume is an essential reference to both researchers and graduate students in mathematical analysis **Geometric Analysis and Nonlinear Partial Differential Equations** Stefan Hildebrandt, Hermann Karcher, 2012-12-06 This book is not a textbook but rather a coherent collection of papers from the field of partial differential equations Nevertheless we believe that it may very well serve as a good introduction into some

topics of this classical field of analysis which despite of its long history is highly modern and well prospering Richard Courant wrote in 1950 It has always been a temptation for mathematicians to present the crystallized product of their thought as a deductive general theory and to relegate the individual mathematical phenomenon into the role of an example The reader who submits to the dogmatic form will be easily indoctrinated Enlightenment however must come from an understanding of motives live mathematical development springs from specific natural problems which can be easily understood but whose solutions are difficult and demand new methods or more general significance We think that many if not all papers of this book are written in this spirit and will give the reader access to an important branch of analysis by exhibiting interesting problems worth to be studied Most of the collected articles have an extensive introductory part describing the history of the presented problems as well as the state of the art and offer a well chosen guide to the literature This way the papers became lengthier than customary these days but the level of presentation is such that an advanced graduate student should find the various articles both readable and stimulating

Dynamics, Geometry, Number Theory David Fisher, Dmitry Kleinbock, Gregory Soifer, 2022-02-07 This definitive synthesis of mathematician Gregory Margulis's research brings together leading experts to cover the breadth and diversity of disciplines Margulis's work touches upon This edited collection highlights the foundations and evolution of research by widely influential Fields Medalist Gregory Margulis Margulis is unusual in the degree to which his solutions to particular problems have opened new vistas of mathematics his ideas were central for example to developments that led to the recent Fields Medals of Elon Lindenstrauss and Maryam Mirzakhani Dynamics Geometry Number Theory introduces these areas their development their use in current research and the connections between them Divided into four broad sections Arithmeticity Superrigidity Normal Subgroups Discrete Subgroups Expanders Representations Spectral Theory and Homogeneous Dynamics the chapters have all been written by the foremost experts on each topic with a view to making them accessible both to graduate students and to experts in other parts of mathematics This was no simple feat Margulis's work stands out in part because of its depth but also because it brings together ideas from different areas of mathematics Few can be experts in all of these fields and this diversity of ideas can make it challenging to enter Margulis's area of research Dynamics Geometry Number Theory provides one remedy to that challenge

Geometry of Nonpositively Curved Manifolds Patrick Eberlein, 1996 Starting from the foundations the author presents an almost entirely self contained treatment of differentiable spaces of nonpositive curvature focusing on the symmetric spaces in which every geodesic lies in a flat Euclidean space of dimension at least two The book builds to a discussion of the Mostow Rigidity Theorem and its generalizations and concludes by exploring the relationship in nonpositively curved spaces between geometric and algebraic properties of the fundamental group This introduction to the geometry of symmetric spaces of non compact type will serve as an excellent guide for graduate students new to the material and will also be a useful reference text for mathematicians already familiar with the subject

Riemannian Geometry and

Geometric Analysis Jürgen Jost, 2011-07-28 This established reference work continues to lead its readers to some of the hottest topics of contemporary mathematical research The previous edition already introduced and explained the ideas of the parabolic methods that had found a spectacular success in the work of Perelman at the examples of closed geodesics and harmonic forms It also discussed further examples of geometric variational problems from quantum field theory another source of profound new ideas and methods in geometry The 6th edition includes a systematic treatment of eigenvalues of Riemannian manifolds and several other additions Also the entire material has been reorganized in order to improve the coherence of the book From the reviews This book provides a very readable introduction to Riemannian geometry and geometric analysis With the vast development of the mathematical subject of geometric analysis the present textbook is most welcome Mathematical Reviews the material is self contained Each chapter ends with a set of exercises Most of the paragraphs have a section Perspectives written with the aim to place the material in a broader context and explain further results and directions Zentralblatt MATH

In the Tradition of Ahlfors-Bers, V Mario Bonk, 2010 The Ahlfors Bers Colloquia commemorate the mathematical legacy of Lars Ahlfors and Lipman Bers The core of this legacy lies in the fields of geometric function theory Teichmüller theory hyperbolic geometry and partial differential equations However the work of Ahlfors and Bers has impacted and created interactions with many other fields of mathematics such as algebraic geometry dynamical systems topology geometric group theory mathematical physics and number theory Recent years have seen a flowering of this legacy with an increased interest in their work This current volume contains articles on a wide variety of subjects that are central to this legacy These include papers in Kleinian groups classical Riemann surface theory translation surfaces algebraic geometry and dynamics The majority of the papers present new research but there are survey articles as well
