Metrology Of Pedestrian Locomotion And Slip Resistance:

Metrology of Pedestrian Locomotion and Slip Resistance Mark I. Marpet, Michael A. Sapienza, 2003 Papers from the June 2001 Symposium on Metrology of Pedestrian Locomotion and Slip Resistance present the latest research findings on both how much friction pedestrians require during ambulation and how to measure the friction available between the walkway surface and the shoe bottom Some specific

Engineering Metrology for Pedestrian Falls Prevention and Protection In-Ju Kim, 2022-03-25 This book explains how to improve the validity reliability and repeatability of slip resistance assessments amongst a range of shoes floors and environments from an engineering metrology viewpoint covering theoretical and experimental aspects of slip resistance mechanics and mechanisms Pedestrian falls resulting from slips or falls are one of the foremost causes of fatal and non fatal injuries that limit people s functionality There have been prolonged efforts globally to identify and understand their main causes and reduce their frequency and severity This book deals with large volumes of information on tribological characteristics such as friction and wear behaviours of the shoes and floors and their interactive impacts on slip resistance performances Readers are introduced to theoretical concepts and models and collected evidence on slip resistance properties amongst a range of shoe and floor types and materials under various ambulatory settings These approaches can be used to develop secure design strategies against fall incidents and provide a great step forward to build safer shoes floors and walking working environments for industries and communities around the world The book includes many case studies

Pedestrian Fall Safety Assessments In-Ju Kim, 2017-04-25 This book examines pedestrian shoe floor slip resistance from an engineering standpoint in order to better understand friction and wear behavior This analysis includes an extensive investigation into the surface properties of shoes and floor and the measurement of dynamic friction and other mechanical and physical aspects of shoe floor tribology Lastly the book proposes a measurement concept for the identification and classification of operational floor surfaces under a range of different conditions Novel techniques and methods are proposed that can improve the reliability of slip resistance assessments The current state of knowledge is critically examined and discussed from a tribological perspective including aspects like friction wear lubrication and the mechanical behavior of shoes floors and their wider environment Further the book reports on extensive experimental investigations into the topographical characteristics of shoe and floor surfaces and how they affect slip resistance Slips resulting in pedestrian falls are a major cause of injuries and deaths for all age groups This important book provides essential insights for researchers practicing engineers and public safety officials wishing to learn about how the risk of pedestrian slips can be assessed and understood
