**Identifying and Interpreting Animal Bones** April M. Beisaw, 2013-11-21 Offering a field tested analytic method for identifying faunal remains along with helpful references images and examples of the most commonly encountered North American species Identifying and Interpreting Animal Bones A Manual provides an important new reference for students avocational archaeologists and even naturalists and wildlife enthusiasts Using the basic principles outlined here the bones of any vertebrate animal including humans can be identified and their relevance to common research questions can be better understood Because the interpretation of archaeological

sites depends heavily on the analysis of surrounding materials soils artifacts and floral and faunal remains it is important that non human remains be correctly distinguished from human bones that distinctions between domesticated and wild or feral animals be made correctly and that evidence of the reasons for faunal remains in the site be recognized But the ability to identify and analyze animal bones is a skill that is not easy to learn from a traditional textbook In *Identifying and Interpreting Animal Bones* veteran archaeologist and educator April Beisaw guides readers through the stages of identification and analysis with sample images and data also illustrating how specialists make analytical decisions that allow for the identification of the smallest fragments of bone Extensive additional illustrative material from the author s own collected assemblages and from those in the Archaeological Analytical Research Facility at Binghamton University in New York are also available in the book s online supplement There readers can view and interact with images to further understanding of the principles explained in the text

management as well as standard methods of archaeological data collection and analysis      Social Adaptation to Food Stress  
Paul E. Minnis, 1985-04 Combining anthropology archeology and evolutionary theory Paul E Minnis develops a model of how tribal societies deal with severe food shortages While focusing on the prehistory of the Rio Mimbres region of New Mexico he provides comparative data from the Fringe Enga of New Guinea the Tikopia of Tikopia Island and the Gwembe Tonga of South Africa Minnis proposes that faced with the threat of food shortages nonstratified societies survive by employing a series of responses that are increasingly effective but also are increasingly costly and demand increasingly larger cooperative efforts The model Minnis develops allows him to infer from evidence of such factors as population size resource productivity and climate change the occurrence of food crises in the past Using the Classic Mimbres society as a test case he summarizes the regional archeological sequence and analyzes the effects of environmental fluctuations on economic and social organization He concludes that the responses of the Mimbres people to their burgeoning population were inadequate to prevent the collapse of the society in the late twelfth century In its illumination of the general issue of responses to food shortages Social Adaptation to Food Stress will interest not only archeologists but also those concerned with current food shortages in the Third World Cultural ecologists and human geographers will be able to derive a wealth of ideas methods and data from Minnis s work      **Volcanic Activity and Human Ecology** Payson D. Sheets, Donald K. Grayson, 2013-09-24  
Volcanic Activity and Human Ecology deals with dating chronology stratigraphy volcanic activity and with the impacts of volcanism on animals plants human populations and the environment Some of the chapters explain how such findings must be weighed against other causes that influence human behavior and survival such as factors of social customs climatic change shifting biogeographic patterns disease and the ability to adapt Each of the chapters that assess the possible human response to volcanism does so by searching for multiple explanations of the archaeological record avoiding the simple argument that people were dramatically and inevitably overcome by catastrophic geologic events The book begins with discussions of volcanism as seen by geologists and pedologists These include s a general overview of volcanoes and volcanism a review of the production dispersal and properties of tephra and of the geologic methods used to study tephra and the nature of volcanic soils and their economic impact Subsequent chapters use the geologic and modern records to examine volcanoes as hazards to people The final series of papers deals with the interrelationships between volcanism and human occupations as seen through the archaeological paleobotanical and paleozoological records
