Mhc Vol 1 Antigen Processing And Presentation:

Antigen Processing and Presentation Protocols Joyce C. Solheim, 2007-10-26 Antigen processing and presentation as a field explores a broad range of protein interactions and functions both intracellular in the cytoplasm and in the endoplasmic reticulum and at the cell surface between T cells and MHC molecules To investigate such a diverse array it is necessary that biochemical cell biology and immunological techniques all be employed The purpose of Antigen Processing and Presentation Protocols is therefore to detail the most up to date techniques being used in this burgeoning field Such techniques include those used to question how MHC binding peptides are generated to test how peptides are delivered to MHC molecules to analyze MHC peptide binding patterns and to assay the T cell response to MHC peptide Antigen Processing and Presentation Protocols should aid both those new and those experienced in this area of research in extending the questions that can be asked and answered by the application of these current methods For editorial assistance I would like to thank Angela Beninga and Rachael Turnquist
