Solutions and Microemulsions Sow Hsin Chen, Raj Rajagopalan, 2012-12-06 During the last decade there has been a renewed interest in research on supramolecular assemblies in solutions such as micelles and microemulsions not only because of their extensive applications in industries dealing with catalysts detergency biotechnology and enhanced oil recovery but also due to the development of new and more powerful experimental and theoretical tools for probing the microscopic behavior of these systems Prominent among the array of the newly available experimental techniques are photon correlation spectroscopy small angle neutron and X ray scattering and neutron spin echo and nuclear magnetic resonance spectroscopies On the theoretical side the traditionally emphasized thermodynamic approach to the study of the phase behavior of self assembled systems in solutions is gradually being replaced by statistical mechanical studies of semi microscopic and microscopic models of the assemblies Since the statistical mechanical approach demands as its starting point the microscopic structural information of the self assembled system the experimental determination of the structures of micelles and microemulsions becomes of paramount interest In this regard the scattering techniques mentioned above have played an important role in recent years and will continue to do so in the future In applying the scattering techniques to the supramolecular species in solution one cannot often regard the solution to be ideal This is because the inter aggregate interaction is often long ranged since it is coulombic in nature and the interparticle correlations are thus appreciable

Inorganic Particle Synthesis via Macro and Microemulsions Dibyendu Ganguli, Munia Ganguli, 2012-12-06 Nanotechnology is now very well known as one of the most important key technologies in science and industry In the field of material science and engineering nanoparticles should be unit materials as well as atoms and molecules to build ceramics devices catalysts and machines and the nanoparticle technology is thus attracting This novel technology includes various methodologies for nanoparticles preparation surface modification via chemical and or physical treatments immobilization and arrangement on supports or substrates to achieve high performance for luminescence properties in light emitting devices and high efficiency for catalytic and photocatalytic reactions in chemical synthesis chemical decomposition and artificial photosynthesis etc It should be needless to say that the preparation of nanoparticles having precisely controlled particle size size distribution chemical composition and surface properties is essentially important to realize true nanoparticle technology

This book written by Dr Dibyendu Ganguli and Dr Munia Ganguli deals with the preparation methodologies for inorganic nanoparticles using macro and microemulsions as microreactor. There are several differences between these two emulsions in addition to water droplet size, thermodynamic stability and fusion/redispersion dynamics of the droplets. The properties of the nanoparticles prepared in these emulsion systems are seriously influenced and controlled by the selection of dynamic and static conditions.

Surfactant Science and Technology Laurence S. Romsted, 2014-05-05. Surfactant research explores the forces responsible for surfactant assembly and the critical industrial, medical and personal applications including viscosity control, microelectronics, drug stabilization, drug delivery, cosmetics, enhanced oil recovery and foods. **Surfactant Science and Technology: Retrospects and Prospects**, a Festschrift in honor of Dr Kash Mittal, provides a broad perspective with chapters contributed by leaders in the fields of surfactant-based physical, organic and materials chemistries. Many of the authors participated in a special symposium in Melbourne, Australia, honoring Kash Mittal's 100th birthday. Edited by Kash Mittal, this 18th volume in the **SIS meeting** series. Each chapter provides an overview of a specific research area with discussions on past, present and future directions. The book is divided into six parts. Part I reviews the evolution of theoretical models for surfactant self-assembly and introduces a model for interpreting ion-specific effects on aggregate properties. Part II focuses on interactions of surfactant solutions with solid supports, uses contact angles to understand hydrophobic/hydrophilic changes in a lipid layer, uses surface tension to understand molecular arrangements at interfaces, reviews spreading phenomena, discusses pattern formation on solid surfaces and applies tensiometry to probe flavor components of espresso. Part III discusses novel DNA-based materials, multifunctional poly(amino acid)s-based graft polymers for drug delivery and polymeric surfactants for stabilizing suspensions and emulsions. Part IV introduces farm-based biosurfactants from natural products and greener biosurfactants from bacteria. Part V explores lyotropic liquid crystals and their applications in triggered drug release, microemulsion properties and controlled drug release, the role of hydrotopes in formulations and in enhancing solubilization in liquid crystals, the potential of ionic liquids to generate tunable and selective reaction media and provides an overview of stimuli-responsive surfactants. Focusing on emulsions, Part VI reviews the design of emulsion properties for various commercial applications, the role of surfactants in the oil and gas industries and surfactant mechanisms for soil removal via microemulsions and emulsification.
