MacDonald,Kevin M. Wagner,2023-08-25 Does the Internet fundamentally change the flow of politically relevant information even in authoritarian regimes If so does it alter the

attitudes and behavior of citizens While there is a fair amount of research exploring how social media has empowered social actors to challenge authoritarian regimes there is much less addressing whether and how the state can actively shape the flow of information to its advantage In China for instance citizens often resort to rightful resistance to lodge complaints and defend rights By using the rhetoric of the central government powerless citizens may exploit the slim political opportunity structure and negotiate with the state for better governance But this tactic also reinforces the legitimacy of authoritarian states citizens engage rightful resistance precisely because they trust the state at least the central government to some degree Drawing on original survey data and rich qualitative sources *Directed Digital Dissidence in Autocracies* explores how authoritarian regimes employ the Internet in advantageous ways to direct the flow of online information The authors argue that the central Chinese government successfully directs citizen dissent toward local government through critical information that the central government places online a strategy that the authors call directed digital dissidence In this context citizens engage in low level protest toward the local government and thereby feel empowered while the central government avoids overthrow Consequently the Internet functions to discipline local state agents and to project a benevolent image of the central government and the regime as a whole With an in depth look at the COVID 19 and Xinjiang Cotton cases the authors demonstrate how the Chinese state employs directed digital dissidence and discuss the impact and limitations of China's information strategy
