*X-ray Contrast Agent Technology* Christoph de Haen, 2019-04-08 This book documents the fascinating history of radiological techniques that use contrast agents. The text includes many of the fundamental documentary sources that bring to life the social and scientific background of the discoveries the personalities of the discoverers and implementation of new technologies. Such agents when used with X rays allow clinicians to distinguish anatomical structures with nearly identical densities. Focus is on urological and angiographic uses of contrast agents. Key selling features: Documents and thoroughly references the history of contrast agent development; Reviews the priority and importance of patents; Discusses the role that important individual scientists and leading research institutions have played in technology development and implementation.

Methodology, 1985-09-01 Profiles of Drug Substances Excipients and Related Methodology    **Radiocontrast Agents** M. Sovak, 2012-12-06 Contrast media are drugs by default Had there been no default there would be no need for a related pharmacology and thus no need for this book. Radiographic contrast media CM are substances whose primary purpose is to enhance diagnostic information of medical imaging systems. The position of CM in pharmacology is unique First there is the unusual requirement of biological inertness An ideal CM should be completely biologically inert i.e. stable not pharmacologically active and efficiently and innocuously excreted. Because they fail to meet these requirements CM must be considered drugs The second unusual aspect of CM is that they are used in large quantities their annual production being measured in tens of tons It is not in spite of but because of the increased use of new radiographic systems computed tomography digital radiography etc that consumption is on the rise And it is not likely that the other emerging imaging modalities NMR ultrasonography etc will displace radiographic CM soon it is quite probable that these remarkable compounds will continue to play an active role in diagnostic imaging in the foreseeable future    **Chronic Renal Disease**

Nancy B. Cummings, S. Klahr, 2012-12-06 Chronic renal disease has received increasing attention and concern since the passage in 1972 of PL 92-603 which provided coverage for end stage renal disease ESRD treatment by the federal government. The human and economic costs of the ESRD program serve to emphasize the need to prevent or to arrest those diseases resulting in chronic renal failure since none of the available treatments is without complications and/or side effects. The ESRD program the only federal one that provides coverage for a catastrophic illness for almost the entire population those qualifying under Social Security cost almost 2 billion in 1983 The escalating costs of the ESRD program are attributed to the increasing number of patients requiring treatment and have focused concerns of the United States Government both Congress and the administration on ESRD The National Institutes of Health NIH especially the Kidney Urology and

Hematology Division of the National Institutes of Arthritis Diabetes and Digestive and Kidney Diseases NIADDK supports a sizable research program that bears on chronic renal disease and in association with this has sponsored many conferences and workshops on research on and causes and complications of chronic renal failure This book is an outgrowth of the issues addressed by participants at a number of NIH conferences held in the 1980s    Irregular Serials & Annuals ,1976

Jovitas Skucas,1989    *Radiocontrast Agents* Peter Klerner Knoefel,1971    **Allergic Reactions to Drugs** Alain L. de Weck,H. Bundgaard,2012-12-06 According to most studies allergic reactions represent 35% 50% of all untoward reactions to drugs yet the pharmacological literature concerning the clinical aspects diagnosis and pathophysiological mechanisms of drug allergy is markedly less extensive than reports dealing with the toxicological or pharmacological effects of drugs The main reasons for this state of affairs may be on the one hand that until a few years ago the pathophysiological mechanisms of the various types of allergic reactions were not well understood and on the other hand that objective diagnosis of a drug allergy is still fraught with serious difficulties Drug allergy is still an unpopular topic for most allergologists and pharmacologists this is reflected by the fact that despite their frequency allergic reactions to drugs still occupy a relatively small proportion of space in most pharmacology handbooks and in classical books devoted to the side effects of drugs There has recently been considerable progress in research into the immunological and pathophysiological events occurring in allergic reactions and on that basis investigations of various drug allergies have also yielded new objective findings Consequently it was natural to attempt a review of the most frequent and important drug allergies in the form of a handbook We originally intended to present a comprehensive review of all drug allergies but the realization of this goal soon became more difficult than we had at first imagined

**Contrast Media in Radiology** M. Amiel,2012-12-06 Journalists always very direct and in search of sensation essentially asked me two questions on the occasion of this workshop What were the goals of the meeting With the improvement of diagnosis through the development of image techniques didn't the contrast media already have their future behind them Many answers were provided during the course of the workshop and in order to best answer the journalists I proposed the following synopsis 1 Since the 1979 Colorado Springs workshop organized by E Lasser progress has been so rapid and the newly available works so numerous that another meeting on an international level for the purpose of presenting and discussing these advances appeared indispensable Why not then in Europe and why not in Lyon To expand on this progress by 1981 the new contrast media with less hyperosmolar molecules still in the trial stage in 1979 were almost all available commercially for angiography albeit at prohibitive prices The advantages of these various media are becoming better known moreover in the wake of Lasser's work our understanding of the pathophysiology of their noxious effects is also advancing rapidly owing to the use of models for the target organs heart vessel wall nervous system kidney and for the more general reactions blood cells coagulation complement system circulating enzymatic systems In addition further
