figurations and functional loss as seen with keloids or endocrine orbitopathy or for life threatening complications such as hepatic hemangiomas or juvenile angiofibromas that occur in children or adolescents Many of the non malignant diseases can have a major and lasting effect on quality of life by causing pain or other serious symptoms particularly when other methods of treatment are unavailable have failed or may induce more side effects It is not generally the first choice of therapy in these non malignant diseases but it is acceptable as defined The book edited by Seegenschmiedt et al
