Regression with Graphics Lawrence C. Hamilton, 1992. This text demonstrates how computing power has expanded the role of graphics in analyzing, exploring, and experimenting with raw data. It is primarily intended for students whose research requires more than an introductory statistics course, but who may not have an extensive background in rigorous mathematics. It's also suitable for courses with students of varying mathematical abilities. Hamilton provides students with a practical, realistic, and graphical approach to regression analysis so that they are better prepared to solve real, sometimes messy, problems. For students and professors who prefer a heavier mathematical emphasis, the author has included optional sections throughout the text where the formal mathematical development of the material is explained in greater detail. **REGRESSION WITH GRAPHICS** is appropriate for use with any or no statistical computer package. However, Hamilton used STAT A in the development of the text due to its ease of application and sophisticated graphics capabilities. STATA is available in a student package from Duxbury, including a tutorial by the same author. Hamilton. **STATISTICS WITH STAT A** 5.0 1998 ISBN 0 534
