Regulation Of Aldosterone Biosynthesis Physiological And Clinical Aspects 2nd Ed:

Regulation of Aldosterone Biosynthesis Jürg Müller, 2012-12-06 Sixteen years is a long time not only in human life but also in the rapid history of contemporary endocrinology. Since the publication of the first edition of this monograph numerous new lines of research and discoveries have greatly contributed to our knowledge of the physiological and pathological regulation of aldosterone biosynthesis in man and animals. The first reports about a sensitive radioimmunoassay for plasma aldosterone and about a preparation of dispersed zona glomerulosa cells were published in 1970. Mayes et al 1970 Haning et al 1970. These two developments alone turned out to have a tremendous impact on research in aldosterone physiology for reviews see Coghlan et al 1979b J F Tait et al 1980b. In 1971 atrial natriuretic peptides, somatostatin and the precursor molecule of ACTH had not yet been discovered. Angiotensin antagonists and converting enzyme inhibitors were not yet available. The clinical syndrome of hyporeninemic hypoaldosteronism was unknown. The possible roles of prostaglandins and dopamine in the control of aldosterone production had not been considered. Cyclic AMP was then the only substance with a clearly established second messenger function.

Endocrinology of Cardiovascular Function Ellis R. Levin, Jerry L. Nadler, 2012-12-06 Endocrinology of Cardiovascular Function is a fitting inauguration to the Endocrine Update Series. The aim of these publications is to provide the clinician with cutting edge yet succinct access to the latest advances in endocrinology. Historically our understanding of hormonal disturbances was restricted to the classical secretory glands and their targets. As Endocrinology of Cardiovascular Function so aptly indicates endocrinology is no longer constrained by our early physiologic understanding of glandular disorder. Endocrinology of Cardiovascular Function has set the standard of excellence for the future volumes in this series. Shlomo Melmed M D Series Editor Endocrine Update. Growth factors such as IGF 1 play important roles in cardiovascular cell hypertrophy and the response to acute vascular injury. From another perspective traditional endocrine hormones such as estrogen have been found to participate in preventing the development of atherosclerosis in women acting through novel mechanisms on target vascular cells. Other endocrine hormones such as PTHrP and adrenomedullin also modulate cardiovascular and renovascular dynamic states suggesting new roles for these peptides as vasodilators. This multi-authored text is dedicated to highlighting emerging and important new information regarding the endocrinology of the cardiovascular system. Ellis R Levin M D

Adrenal in Toxicology Philip W. Harvey, 1996-03-28 The adrenal gland is vitally important to health and secretes hormones that control many bodily processes ranging from normal metabolism to the response to stressful circumstances. The corticosteroid hormones are the basis for anti-inflammatory medicines and are very widely prescribed. Changes in the function of the adrenal gland either naturally through stress or disease or through the action of drugs and chemicals can have a major impact on the body. This text focuses on adrenal toxicity examining how drugs and chemicals can directly and indirectly affect this gland. Coverage includes classification of the types of adrenal and endocrine toxicity, the mechanistic and molecular basis of toxicity, reasons

why the adrenal is the most common target organ in the endocrine system drug toxicity specific to patients with adrenal disorders drug corticosteroid interactions adverse drug reactions and how the adrenal gland is vital in tolerance to toxic insult *Archives of Gynecology and Obstetrics* ,1988 **Endocrine and Hormonal Toxicology** Philip W. Harvey, Kevin C. Rush, Andrew Cockburn, 1999-06-18 Endocrine and Hormonal Toxicology Edited by Philip W Harvey Kevin C Rush and Andrew Cockburn AgrEvo UK Ltd Saffron Walden UK This is the first book to consider the integrated role of the classical endocrine system and hormones including those from tissues outside the classical endocrine system in toxicological responses Although focusing on the latest knowledge on endocrine glands as target organs and the mechanistic and molecular basis for toxicity in these organs Endocrine and Hormonal Toxicology has been written to cover toxicological responses at the whole body level mediated by endocrine or hormonal mechanisms This whole body multi organ approach significantly broadens the relevance of this volume to toxicologists Following an introductory section on the types of endocrine toxicity including primary secondary and indirect mechanisms the next section deals with endocrine organs as toxicological targets International contributions focus on the pituitary thyroid and parathyroids adrenals testes ovaries and the pancreas and comparative endocrine carcinogenesis A third section of the book develops the whole body approach in which chapters are devoted to hormonal mechanisms of toxicity to the immune nervous cardiovascular gastrointestinal and reproductive systems as well as to the liver kidney and skin The final section covers human and environmental health perspectives discussing endocrine disrupting chemicals hormonal mechanisms in breast cancer and current regulatory trends in endocrine and hormonal toxicology The comprehensive nature of Endocrine and Hormonal Toxicology makes it accessible to both specialist and general toxicologists and to those within the fields of endocrinology pharmacology and pathology **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1988 International Books in Print ,1991 **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 *Proceedings of the Australian Physiological and Pharmacological Society* Australian Physiological and Pharmacological Society, 1989 The Zoological Record ,1989
