Regulation Of Cellular Signal Transduction Pathways By Desensitization And Amplification:

Regulation of Cellular Signal Transduction Pathways by Desensitization and Amplification David R. Sibley, Miles D. Houslay, 1994-03-29 Molecular Pharmacology of Cell Regulation Series Editor Miles D Houslay This important series provides topical in depth and authoritative reviews on all aspects of the molecular mechanisms of cell regulatory processes It attempts to unravel the molecular structures properties and functions of systems which provide putative targets for the next generation of drugs It will therefore be of major interest to biochemists pharmacologists molecular pathologists endocrinologists cell biologists and research clinicians working on the fundamental description of how cells regulate their own and each other's activity on the development of novel therapeutic agents and on analyses of pathological changes and genetic lesions Volume 3 Regulation of Cellular Signal Transduction Pathways by Desensitization and Amplification Edited by David R Sibley National Institutes of Health Bethesda Maryland USA and Miles D Houslay Institute of Biochemistry University of Glasgow UK Amplification and desensitization are well recognized phenomena in signal transduction systems and descriptions of such phenomena are essential in order to gain insight into the coordinated functioning of cells in normal pathological and transformed states Written by international experts this book will appeal to biochemists pharmacologists and other experimental biologists interested in cellular signalling systems

The Dopamine Receptors Kim Neve, Rachael L. Neve, 2013-03-09 Seven years after the cloning of the rat dopamine D receptor and four 2 years after the cloning of the last mammalian dopamine receptor identified to date this seems to be an excellent time to put together the present The Dopamine Receptors volume of this series The Receptors There has been time for considerable characterization of the novel receptor subtypes and new exciting lines of research from the molecular to the behavioral levels are taking shape We asked the contributors to The Dopamine Receptors to follow the superb example set by the previous volumes in this series by writing comprehensive historical reviews that will comprise an essential resource for specialists and newcomers to the dopamine receptor field while at the same time providing up to date summaries of the most active areas of research It is difficult these days to write about receptors without addressing the issue of receptor nomenclature For dopamine receptors valid arguments can be made for a system in which the subtypes are classified as belonging to the D1 or D2 classes with letters assigned in the order of cloning D A D D A 1 18 2 D Dc We decided however that common usage counts for something and 28 2 chose to use D D and D for the D2 like receptors because these names are 2 3 4 nearly unanimously used in the literature

Signal Transduction Mechanisms J.A. Barnes, H.G. Coore, Abdul H. Mohammed, Rajendra K. Sharma, 2013-03-09 This volume contains the proceedings of an International Symposium on Second Messenger Systems Molecular Cellular and Behavioural Aspects which was held at Tobago on June 16 17 1994 The interaction of an extracellular agonist First Messenger with its plasma membrane receptor leads to the transmission of a signal across the cell membrane and results in the production and or activation of other signalling molecules Second Messengers These Second Messengers control the

action of many protein kinases and protein phosphatases and so lead to cellular responses Although the biochemical basis of the transduction of signals in the main signalling systems in eukaryotic cells is probably largely known intensified research is ongoing in the following areas the discovery of specific substrates for many protein kinases elucidation of the biological significance of the differential tissue expression and heterogeneity of many signalling proteins and the unravelling of diverse interactions such as signal potentiation synergism antagonism and neuronal co transmission between signalling systems As knowledge from such studies accumulates it is becoming clear that the cross talk interactions between signalling systems are important features of dynamic cell regulation This volume is designed to summarize some aspects of the current work on various Second Messenger Systems and the integration of signals with respect to plasma membrane receptors Second Messenger generation and degradation protein kinase and phosphatase cell cycle control and cellular learning and memory

Autonomic Pharmacology Kenneth J Broadley, 2017-12-14 This overview of autonomic pharmacology describes the anatomy physiology and pharmacology of the autonomic involuntary nervous system Covering the diverse group of drugs acting on the autonomous nervous system their actions are reviewed together with their clinical uses side effects interactions and subcellular mechanisms of action Information is organized in a logical flow bringing together the latest advances in an integrated form on topics usually found only in a fragmented form This work is intended for all those researching in industry and academic institutions in pharmaceutical pharmacological sciences pharmacy medical sciences physiology neurosciences biochemistry and molecular biology

Molecular and Cellular Physiology of Neurons Gordon L. Fain, 1999 This book provides a comprehensive and up to date account of what we now know and what we want to know and can reasonably expect to discover in the near future about the functioning of the brain at the level of molecules and cells It takes readers from the fundamentals to the most sophisticated concepts and latest discoveries from membrane potentials to recent experiments on voltage gated ion channels from descriptions of receptors G proteins effector molecules and secondary messengers to an account of our current understanding of long term potentiation

New Developments in Lipid-Protein Interactions and Receptor Function K.W.A. Wirtz, Lester Packer, J.Å. Gustafsson, A.E. Evangelopoulos, J.P.

Changeux, 2012-12-06 A NATO Advanced Study Institute on New Developments in Lipid Protein Interactions and Receptor Function was held on the Island of Spetsai Greece from August 16 27 1992 This Institute was organized to bring together researchers in the field of membrane organization and dynamics with those actively involved in studies on receptor function signal transduction mechanisms and gene regulation 2 Presentations and discussions focussed on the regulation of intracellular Ca levels on the second messengers derived from inositol lipids and on the specific phospholipase C isozymes involved in these processes A major focus was on G proteins and the effect of lipid anchors on their function These principles of regulation were further discussed in the context of receptors for acetylcholine lysophosphatidic acid and low density lipoproteins In addition various aspects of the genomic regulation of cell growth and differentiation by transcription factors

were presented These topics were put into perspective by discussing the most recent developments in lipid protein interactions protein insertion into membranes membrane lipid organization and lipid dynamics as mediated by phospholipid transfer proteins This book presents the content of the major lectures and a selection of the most relevant of the most important topics posters These proceedings offer a comprehensive account presented during the course of the Institute The book is intended to make these proceedings accessible to a large audience
