Regulatory T Cells in Inflammation Leonie S. Taams,Arne N. Akbar,Marca H.M. Wauben,2006-03-30 Regulatory T cells are essential components of the immune system and several different subsets of regulatory T cells have been described Considerable regulatory function has been attributed to the CD4 CD25 T cell subset These cells act by suppressing adaptive and possibly innate immune responses thereby maintaining or restoring the balance between immunity and tolerance The suppressive effects of CD4 CD25 regulatory T cells are cell contact dependent Recent developments and viewpoints in the field of CD4 CD25 regulatory T cells as well as the potential use of regulatory T cells in immunotherapy of inflammatory diseases are discussed in this volume By linking data from experimental models with recent findings from the clinic this book will be of interest to immunologists and other biomedical researchers as well as clinicians interested in the regulation and manipulation of the immune response during inflammatory disease

Chronic Inflammation Masayuki Miyasaka,Kiyoshi Takatsu,2016-11-01 This book provides readers with the most up to date information on cutting edge research concerning chronic inflammation We now know that when inflammation becomes chronic it acts as a strong disease promoting factor in a variety of disorders including arteriosclerosis obesity cancer and Alzheimer disease Chronic inflammation is hence called as the silent killer it upsets the body's homeostatic mechanism insidiously In spite of these developments we know very little about the mechanism underlying chronic inflammation Particularly we do not know precisely what induces chronic inflammation or what promotes its prolongation in

a spatiotemporal framework Neither do we have clear knowledge about how chronic inflammation destroys various tissues or how it predisposes individuals to many different diseases To make the situation worse we have no effective treatment against chronic inflammation Since 2010 two major research programs CREST and PRESTO aimed at clarifying the mechanisms underlying chronic inflammation were launched in Japan and investigators of different research areas with a brilliant track record were selected by their research proposals Subsequently they have made their best efforts to answer the conundrum concerning chronic inflammation This book is a compendium of such research efforts In each chapter the CREST or PRESTO funded researchers summarize their original work concerning mechanisms of induction progression or resolution underlying chronic inflammation The most emphasized characteristic is the molecular aspect of chronic inflammation The book thus presents the most recent progress made in the molecular understanding of chronic inflammation *The Immuno-regulatory Role of Natural Killer T Cells in Inflammatory Disease* J. Differentiation and Function in Tissue Inflammation Amit Awasthi, Ritobrata Goswami, 2020-03-11 **Regulatory T cells and Autoimmune Diseases** Mitesh Kumar Dwivedi, DeLisa Fairweather, 2024-05-27 Regulatory T cells and Autoimmune Diseases addresses recent findings concerning the role of Tregs in the pathogenesis of autoimmune diseases as well as their therapeutic aspects In particular this book deals with the various Treg based mechanisms which can lead to autoimmune diseases and covers the different aspects of linking Tregs with autoimmune mechanisms involved in disease development by discussing animal models and human studies The book specifically focuses on the Treg based therapeutics and their targets to manage all known autoimmune rheumatic central nervous system bowel liver thyroid kidney myopathic skin blood blood vessel and eye diseases and aims to provide a must have reference for designing therapeutic strategies to treat these autoimmune diseases Additionally the book covers the vaccines induced effects on functioning of Tregs and development of CAR Tregs therapy for these autoimmune diseases and concludes with current challenges and future prospects of Treg based therapeutics It is carefully designed to meet the requirements of both basic and advanced researchers in the area and give new dimensions and insight into the regulatory T cells role in autoimmune disease pathogenesis and therapeutic aspects Brings the reader up to date on the mechanisms of regulatory T cells Tregs in pathogenesis and therapeutics of all autoimmune diseases known to date Provides explicit color illustrations and comprehensible tables for explaining the mechanistic aspects and emerging information in the field Includes human clinical trials and animal model studies for Tregs in diverse autoimmune diseases for the mitigation of the symptoms of autoimmune diseases Offers scientifically applicable and relevant content for readers of various disciplines including biomedical sciences medical microbiology biotechnology immunology and medicine Study on the Immunomodulatory Potential of Regulatory T Cells Induced by B Cells in Joint Inflammation □□□, 2016 **The Molecular Mechanisms of Chronic Inflammation Development** Masaaki Murakami, Toshio Hirano, Inflammation is critical for the development of many complex diseases and

disorders including autoimmune diseases metabolic syndrome neurodegenerative diseases cancers and cardiovascular diseases Inflammation comes as two types chronic inflammation which can be defined as a dysregulated form of inflammation and acute inflammation which can be defined as a regulated form Because of its special role in the aforementioned diseases establishing methods to control chronic inflammation is important for developing cures and treatments One challenge for this purpose has been the ability to distinguish chronic and acute inflammation based on molecular biology diagnostics Thus this Research Topic is focused on articles that can shed some new light on the molecular mechanisms responsible for the development of chronic inflammation and its related conditions

Regulatory T Cells Xuehui He, 2023-06 In healthy humans effector immune cells are activated by the presence of pathogens Various signaling pathways coordinate the growth and proliferation of the immune cells to fight the invading pathogen and keep the host healthy A portion of white blood cells known as regulatory T cells Treg help to control the rapid proliferation of effector immune cells including effector T cells as well as antigen presenting cells to make sure the inflammation is kept in check When Treg cells are depleted or undergo loss of suppressive functionality hyperinflammatory disease results However Treg depletion can also provoke and enhance tumor immunity Therefore targeting Treg cells is a promising approach for both autoimmune disease and cancer immunotherapy To attenuate or enhance Treg mediated immune suppression it is necessary to find a specific molecular marker that can selectively and reliably differentiate between Treg and effector T cells Further elucidation of the cellular and molecular processes underlying the development and function of regulatory immune cells will help to establish new strategies for the treatment and prevention of immune mediated disease
