Reiser + Umemoto Andrew Benjamin,Reiser + Umemoto,1998-08-31

This is an architectural monograph on the work of New York based Jesse Reiser and Nanako Umemoto It provides descriptions of their theories and design and is illustrated in colour with original images

Projects and Their Consequences Jesse Reiser,2019-05-28 Projects and Their Consequences presents fifteen key projects from leading architectural thinkers Reiser Umemoto Projects and Their Consequences traces thirty years of innovative multidisciplinary investigations of form structure technique and planning Projects include large scale studies of infrastructure for the East River Corridor and Hudson Yards areas in Manhattan and the Alishan Railway in Taiwan as well as schemes for cultural institutions including the New Museum Children s Museum of Pittsburgh and University of Applied Arts Vienna Also included are thought provoking textual projects narrative works that blur the boundaries of art and architecture Projects and Their Consequences balances incisive interviews and essays with more than 400 strikingly original drawings collages and paintings Large format and beautifully designed it is a necessary volume for architects and those interested in the intersection of architecture art and culture

Architectural Philosophy Andrew E. Benjamin,2000-01-01 Architectural Philosophy is the first book to outline a philosophical account of architecture and to establish the singularity of architectural practice and theory This dazzling sequence of essays opens out the subject of architecture touching on issues as wide ranging as the problem of memory and the dystopias of science fiction Arguing for the indissolubility of form and function Architectural Philosophy explores both the definition of the site and the possibility of alterity The analysis of the nature of the present and the complex sructure of repetition allows for the possibility of judgement a judgement that arises from a reworked politics of architecture

New Flatness Alicia Imperiale,2000-08-01 In recent architecture theory and practise there has been a tendency to refer to exteriors as a skin concealing an interior as opposed to the traditional and more physical concepts of surface flatness and depth The computer now enables the architect to call his design into life free from the rigid material form and view it as a flexible and interactive creation In this book the concepts of flatness and surface tension are examined in the light of virtual design and built reality A selection of projects are presented to show how the architects regard space and surfaces in modern architectural practice in a digital age

The Architect Maggie Toy,2001 The objective of this book is to banish the notion of architecture being a male dominated field by showcasing the work of a wide variety of world class women architects demonstrating the role women are playing in contemporary architecture First book of its kind to survey the role of women in architecture Features a wide international selection of world class contemporary women architects Beautifully illustrated throughout

New Scapes Paola Gregory,2003-04-01 Since the famous competition for the Park La Villette in Paris where the participants included Bernard Tschumi Peter Eisenman and Gilles Deleuze the relationship between building and landscape

has been dramatically transformed Concepts such as metamorphosis and interaction layers and fields are becoming as much a part of architectonic discourse as the practical designs and the realization Author Paola Gregory examines this interplay between buildings and landscapes present in today s architecture scene illustrating her analysis with exciting examples including the ecological landscapes of James Wines and Greg Lynn the virtual environments of Marcos Novak and Nox buildings by Jean Nouvel and Toyo Ito which actively incorporate passers by and surroundings by means of new media

BIM Design Richard Garber,2014-08-11 Building information modelling BIM is revolutionising building design and construction For architects BIM has the potential to optimise their creativity while reducing risk in the design and construction process thus giving them a more significant role in the building process This book demonstrates how innovative firms are using BIM technologies to move design away from the utilitarian problems of construction engaging them in a stunning new future in the built environment Whereas recent books about BIM have tended to favour case study analyses or instruction on the use of specific software BIM Design highlights how day to day design operations are shaped by the increasingly generative and collaborative aspects of these new tools BIM strategies are described as operations that can enhance design rather than simply make it more efficient Thus this book focuses on the specific creative uses of information modelling at the operational level including the creative development of parametric geometries and generative design the evaluation of environmental performance and the simulation and scheduling of construction fabrication operations This book also engages BIM s pragmatic efficiencies such as the conflict checking of building systems and the creation of bills of quantities for costing and in so doing it demonstrates how BIM can make such activities collaborative Throughout projects are used to illustrate the creative application of BIM at a variety of scales These buildings showcase work by fi rms executing projects all over the world SHoP Architects and Construction New York Morphosis Los Angeles Populous London GRO Architects New York Reiser Umemoto New York Gensler Shanghai and UNStudio Amsterdam

Performatism Yasha J. Grobman,Eran Neuman,2012 This book critically examines the implications and influences of computer based design on form as performance In the context of the architectural discourse the book posits that today about fifteen years into the age of digital architecture we can define architectural form and performance as an ism The book is supported by a wealth of case studies from some of the top firms across the globe and contributed to by some of the top names in this field With a unique and insightful emphasis on professional practice this is essential reading for all architects aspiring and practicing
