Scale-Up Processes Jamal Chaouki, Rahmat Sotudeh-Gharebagh, 2021-09-20 Common scale up methods are conventional where the blind piloting is essential This imposes huge investment and leads to failures mostly in solid processing However the limitations of resources current shortcomings short time to market demand are forced companies to minimize piloting With these situations in mind current digitalization outlook and computational facilities we proposed and developed a novel iterative scale up method with case studies which highly expedites the process innovation through the following key sequences

Meniscus Stability in Rotating Systems Yvonne Chen, 2015-06-08 The knowledge of behavior of liquids with free surfaces to their surrounding gaseous phase in compensated gravity is essential to the development of tank systems for spacecrafts In microgravity the liquid behavior is dominated by capillary forces which are used to position and redistribute liquid propellant in a desired way for the mission The body forces occurring due to residual accelerations which can be caused by spin during the ballistic flight phases force the liquid to reorient towards a new equilibrium state of the free surface Due to spin the liquid is driven away from the tank outlet and located along tank walls in partially filled tanks To assure enough liquid fuel over the tank outlet so called Propellant Management Devices PMD s are employed A PMD is a static usually metal structure which either provides a passage way for a liquid in microgravity or stores a certain amount of liquid at a desired location Some PMD s are designed to be refillable in periods of microgravity due to openings in the outer housing or by a housing composed of perforated metallic sheets These reservoirs are refilled in periods of compensated gravity in order to provide the required amount of liquid fuel for attitude control or other maneuverings Relatively large disturbances such as lateral accelerations and spin can drive the liquid fuel out of the reservoir resulting in malfunction of the device During spilling gas enters the device such that only a residual amount of liquid propellant can be kept in the reservoir Moreover the connection to the bulk liquid in the tank may be interrupted such that refilling of the reservoir is disrupted Hence a PMD with two parallel disks forming the inlet and a venting tube at the topmost point of the outer housing shall be designed such that its refillable structure is only filled with liquid without any gas or vapor being easily trapped during operations

Fluid-Structure Interactions: Volume 2 Michael P. Paidoussis, 2016-02-05 The second of two volumes concentrating on the dynamics of slender bodies within or containing axial flow Volume 2 covers fluid structure interactions relating to shells cylinders and plates containing or immersed in axial flow as well as slender structures subjected to annular and leakage flows This volume has been thoroughly updated to reference the latest developments in the field with a continued emphasis on the understanding of dynamical behaviour and analytical

methods needed to provide long term solutions and validate the latest computational methods and codes with increased coverage of computational techniques and numerical methods particularly for the solution of non linear three dimensional problems Provides an in depth review of an extensive range of fluid structure interaction topics with detailed real world examples and thorough referencing throughout for additional detail Organized by structure and problem type allowing you to dip into the sections that are relevant to the particular problem you are facing with numerous appendices containing the equations relevant to specific problems Supports development of long term solutions by focusing on the fundamentals and mechanisms needed to understand underlying causes and operating conditions under which apparent solutions might not prove effective Print Proceedings of the ASME 5th Joint ASME/JSME Fluids Engineering Conference (FEDSM2007) V. 2: July 30-August 2 2007, San Diego, California American Society of Mechanical Engineers. Mechanics of Turbulence that deals with the theory of laminar flow instability and transition to turbulence It includes the considerable advances in the subject that have been made in the last 15 years or so It is intended as a textbook for advanced graduate courses and as a reference for research students and professional research workers The first two Chapters are an introduction to the mathematics and the experimental results for the instability of laminar or inviscid flows to infinitesimal in practice small disturbances The third Chapter develops this linear theory in more detail and describes its application to particular problems Chapters 4 and 5 deal with instability to finite amplitude disturbances much of the material has previously been available only in research papers *Journal of Research of the National Bureau of Standards* ,1975

Extrusion Processing Technology Jean-Marie Bouvier,Osvaldo H. Campanella,2014-06-23 Extrusion is the operation of forming and shaping a molten or dough like material by forcing it through a restriction or die It is applied and used in many batch and continuous processes However extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components melting of polymers mixing of viscous media heat processing of polymeric and biopolymeric materials product texturization and shaping defibering and chemical impregnation of fibrous materials reactive extrusion and fractionation of solid liquid systems Extrusion processing technology is highly complex and in depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area this book aims to provide readers with these analyses and discussions Extrusion Processing Technology Food and Non Food Biomaterials provides an overview of

extrusion processing technology and its established and emerging industrial applications Potency of process intensification and sustainable processing is also discussed and illustrated The book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians The authors bring their research and industrial experience in extrusion processing technology to provide a comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods especially cereals snacks textured and fibrated proteins functional ingredients and instant powders feeds especially aquafeeds and petfoods bioplastics and plastics biosourced chemicals paper pulp and biofuels It will also be of interest to students of food science food engineering and chemical engineering Also available Formulation Engineering of Foods Edited by J E Norton P J Fryer and I T Norton ISBN 978 0 470 67290 7 Food and Industrial Bioproducts and Bioprocessing Edited by N T Dunford ISBN 978 0 8138 2105 4 Handbook of Food Process Design Edited by J Ahmed and M S Rahman ISBN 978 1 4443 3011 3 Advances in Applied Mechanics Erik van der Giessen,Hassan Aref,2012-01-27 The Advances in Applied Mechanics book series draws together recent significant advances in various topics in applied mechanics Published since 1948 Advances in Applied Mechanics aims to provide authoritative review articles on topics in the mechanical sciences primarily of interest to scientists and engineers working in the various branches of mechanics but also of interest to the many who use the results of investigations in mechanics in various application areas such as aerospace chemical civil environmental mechanical and nuclear engineering Highlights classical and modern areas of mechanics that are ready for review Provides comprehensive coverage of the field in question **Department of the Interior and Related Agencies Appropriations for 1998** United States.
