Salamanders Of The Chicago Area:

The Salamanders of the Chicago Area Karl Patterson Schmidt, 1930 *Amphibians and Reptiles of the Chicago Area* Clifford Hillhouse Pope, 1944 **A Natural History of the Chicago Region** Joel Greenberg, 2002 In A Natural History of the Chicago Region Greenberg takes you on a journey that begins with European explorers and settlers and hasn't ended yet. Along the way he introduces you to the physical forces that have shaped the area from southeastern Wisconsin to northern Indiana and Berrien County in Michigan, the various habitat types present in the region, and how European settlement has affected them, and the insects, reptiles, amphibians, birds, fish, and mammals found in presettlement times, then amid the settlers, and now amid the skyscrapers. In all, Greenberg chronicles the development of nineteen counties in Illinois, Michigan, and Wisconsin across centuries of ecological, technological, and social transformations. **BOOK JACKET Amphibians and Reptiles of the Chicago Area** Clifford Hillhouse Pope, 2016-04-18 *Amphibians and Reptiles of the Chicago Area* first published in 1947 is the classic work on the snakes, frogs, salamanders, turtles, and other herps of the Chicago region, southeast Wisconsin, northwest Illinois, northwest Indiana, and southwest Michigan. Illustrated throughout with detailed drawings and organized into the major groups: Amphibians, Salamanders, and Frogs, Reptiles, Lizards, Snakes, and Turtles, each species found in the region is described with extensive information on its life history, habitat requirements, and food preferences. Easy-to-use field keys for identifying each species are also included. Clifford Pope, 1899-1974, was a prominent American herpetologist who was curator of the Amphibian and Reptile Division of the Field Museum of Natural History in Chicago and the author of a number of books on reptiles and amphibians. **The Salamanders of the Chicago Area, by Karl P. Schmidt,...** Karl Patterson Schmidt, 1930 Field Guide to Amphibians and Reptiles of Illinois Christopher A. Phillips, John A. Crawford, Andrew R. Kuhns, 2022-06-28 The second edition of the *Field Guide to Amphibians and Reptiles of Illinois* offers up-to-date information on the state's 102 species of frogs and toads, salamanders, turtles, lizards, and snakes. Detailed descriptions by the authors include habitats, distinguishing features, behaviors, and other facts, while revised range maps and full-color photographs help users recognize animals in the field. In addition, an identification key and easy-to-navigate page layouts guide readers through extensive background material on each species, population, diet, predators, reproduction, and conservation status. A one-of-a-kind resource, the *Field Guide to Amphibians and Reptiles of Illinois* is a definitive guide aimed at biologists, teachers, students, wildlife specialists, natural resource managers, conservationists, law enforcement officials, landowners, hobbyists, and everyone else eager to explore herpetology and nature in the Prairie State. Sculptures by Herbert Haseltine of Champion Domestic Animals of Great Britain Alfred Cleveland Weed, Colin Campbell Sanborn, Field Museum of Natural History, John Henry Patterson, John Todd Zimmer, Karl Patterson Schmidt, Wilfred Hudson Osgood, William Josiah Gerhard, 1922 Visual Behavior in Salamanders Gerhard Roth, 2012-12-06 Salamanders are subject to misconceptions even among vertebrate zoologists and physiologists. They are often said to exist only in northern temperate

zones being bound to aquatic or very moist cool habitats In reality more than half of all salamander species live in subtropical and tropical zones exclusively in the New World Again more than half of the salamander species have become totally independent of aquatic habitats following the loss of a free larval stage Many of the subtropical and tropical salamanders have become adapted to rather high temperatures up to 26-28°C The brain and the sensory systems of salamanders are often considered to be primitive and their behavior is thought to be simple and uninfluenced by learning However careful studies show that the salamander brain possesses virtually all the anatomical and functional properties found in anurans which are usually regarded as being much more evolved with respect to the guidance of comparable behavior Most of the salamander species not only possess a highly efficient visual system which is the topic of the present work but can orient themselves almost as effectively by means of olfaction vibration sense and electroreception Furthermore it has recently been shown that at least part of their behavior especially that concerned with feeding and prey preferences is strongly influenced by individual experience
