Encyclopedia of Applied Physics: Scientific computing by numerical methods to separation processes George L. Trigg, 1991 Encyclopedia of Applied Physics American Institute of Physics, 1996 *Encyclopedia of Applied Physics* George L. Trigg, 1996 *Encyclopedia of Applied Physics* , 1996 **Encyclopedia of Applied Physics.** George L. Trigg, 1996 Scientific Computing in Chemical Engineering Frerich Keil, Wolfgang Mackens, Heinrich Voß, Joachim Werther, 2012-12-06 Scientific Computing in Chemical Engineering gives the state of the art from the point of view of the numerical mathematicians as well as from the engineers The application of modern methods in numerical mathematics on problems in chemical engineering especially reactor modeling process simulation process optimization and the use of parallel computing is detailed **Separation Process Principles with Applications Using Process Simulators** J. D. Seader, Ernest J. Henley, D. Keith Roper, 2016 Covers the key topics in computer organization and embedded systems This title presents hardware design principles and shows how hardware design is influenced by the requirements of software It explains the main principles supported by examples drawn from commercially available processors Advanced Scientific Computing in BASIC with Applications in Chemistry, Biology and Pharmacology P Valko, S. Vajda, 1989-01-01 This book gives a practical introduction to numerical methods and presents BASIC subroutines for real life computations in the areas of chemistry biology and pharmacology The choice of BASIC as the programming language is motivated by its simplicity its availability on all personal computers and by its power in data acquisition While most of the scientific packages currently available in BASIC date back to the period of limited memory and speed the subroutines presented here can handle a broad range of realistic problems with the power and sophistication needed by professionals and with simple step by step instructions for students and beginners Please note that a diskette containing the 37 program modules and 39 sample programs listed in the book is no longer available The main task considered in the book is that of extracting useful information from measurements via modelling simulation and statistical data evaluations Efficient and robust numerical methods have been chosen to solve related problems in numerical algebra nonlinear equations and optimization parameter estimation signal processing and differential equations For each class of routines an introduction to the relevant theory and techniques is given so that the reader will recognise and use the appropriate method for solving his or her particular problem Simple examples illustrate the use and applicability of each method **Large-Scale Scientific Computing** Ivan Lirkov, 2006-02-14 This book constitutes the thoroughly refereed post proceedings of the 5th International Conference on Large Scale Scientific Computations LSSC 2005 held in Sozopol Bulgaria in June 2005 The 75 revised full papers presented together with five invited papers were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections **INTRODUCTION TO NUMERICAL METHODS IN CHEMICAL ENGINEERING, SECOND EDITION** AHUJA, PRADEEP, 2019-08-01 This book is an exhaustive presentation of the applications of numerical methods in chemical

engineering. Intended primarily as a textbook for B.E. B.Tech and M.Tech students of chemical engineering, the book will also be useful for research and development process professionals in the fields of chemical, biochemical, mechanical and biomedical engineering. The book, now in its second edition, comprises three parts. Part I on General Chemical Engineering is the same as given in the first edition of the book. It explains solving linear and non-linear algebraic equations, chemical engineering thermodynamics problems, initial value problems, boundary value problems and topics related to chemical reaction, dispersion and diffusion as well as steady and transient heat conduction. Whereas Part II and Part III, comprising two chapters and six chapters respectively, are newly introduced in the present edition. Besides three appendices covering computer programs, have been included. For practice, the book provides students with numerous worked-out examples and chapter-end exercises including their answers.

NEW TO THE SECOND EDITION

Part II on Fixed Bed Catalytic Reactor consists of solving multiple gas phase reactions in a PFR, diffusion and multiple reactions in a catalytic pellet and fixed bed catalytic reactor with multiple reactions.

Part III on Multicomponent Distillation consists of solving vapour-liquid-liquid isothermal flash using NRTL model, adiabatic flash using Wilson model, bubble point method, theta method and Naphtali Sandholm method for distillation using modified Raoult's law with Wilson activity coefficient model.
