How Modern Science Came Into the World H. F. Cohen, 2010 Once upon a time The Scientific Revolution of the 17th century was an innovative concept that inspired a stimulating narrative of how modern science came into the world Half a century later what we now know as the master narrative serves rather as a strait jacket so often events and contexts just fail to fit in No attempt has been made so far to replace the master narrative H Floris Cohen now comes up with precisely such a replacement Key to his path breaking analysis cum narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected revolutionary transformations each of some twenty five to thirty years duration This vision enables him to explain how modern science could come about in Europe rather than in Greece China or the Islamic world It also enables him to explain how half way into the 17th century a vast crisis of legitimacy could arise and in the end be overcome

The Origins of Modern Science Ofer Gal, 2021-02-04 This book attempts to introduce to its readers major chapters in the history of science It tries to present science as a human endeavor a great achievement and all the more human for it In place of the story of progress and its obstacles or a parade of truths revealed this book stresses the contingent and historical nature of scientific knowledge Knowledge science included is always developed by real people within communities answering immediate needs and challenges shaped by place culture and historical events with resources drawn from their present and past Chronologically this book spans from Pythagorean mathematics to Newton s Principle The book starts in the high Middle Ages and proceeds to introduce the readers to the historian s way of inquiry At the center of this introduction is the Gothic Cathedral a grand achievement of human knowledge rooted in a complex cultural context and a powerful metaphor for science The book alternates thematic chapters with chapters concentrating on an era Yet it attempts to integrate discussion of all different aspects of the making of knowledge social and cultural settings challenges and opportunities intellectual motivations and worries epistemological assumptions and technical ideas instruments and procedures The cathedral metaphor is evoked intermittently throughout to tie the many themes discussed to the main lesson that the complex set of beliefs practices and institutions we call science is a particular contingent human phenomenon
