Service Experience and Life Management Warren H. Bamford, 1993 *Probabilistic Safety Assessment for Optimum Nuclear Power Plant Life Management (PLiM)* Gennadij V Arkadov, Alexander F Getman, Andrei N Rodionov, 2012-09-27

Probabilistic safety assessment methods are used to calculate nuclear power plant durability and resource lifetime. Successful calculation of the reliability and ageing of components is critical for forecasting safety and directing preventative maintenance. Probabilistic safety assessment for optimum nuclear power plant life management provides a comprehensive review of the theory and application of these methods. Part one reviews probabilistic methods for predicting the reliability of equipment. Following an introduction to key terminology, concepts and definitions, formal statistical and various physico-statistical approaches are discussed. Approaches based on the use of defect-free models are considered along with those using binomial distribution and models based on the residual defectiveness of structural materials. The practical applications of probabilistic methods for strength reliability are subsequently explored in part two. Probabilistic methods for increasing the reliability and safety of nuclear power plant components are investigated, as are the use of such methods for optimising non-destructive tests, hydraulic tests, technical certification and planned preventative maintenance. Finally, the book concludes with information on the use of probabilistic methods in ensuring leak-tightness of nuclear power plant steam generator heat exchanger pipes. With its distinguished authors, *Probabilistic safety assessment for optimum nuclear power plant life management* is a valuable reference for all nuclear plant designers, operators, nuclear safety engineers and managers, as well as academics and researchers in this field. Discusses the theory and application of probabilistic safety assessment methods used to calculate nuclear power plant NPP durability and lifetime. Reviews probabilistic methods in their application to NPP components and ageing pipelines for the forecasting of NPP resource lifetime and safety. Addresses the key areas of probabilistic safety analysis, optimization of the operations through in-service inspection (ISI) utilising non-destructive testing and maintenance service and repair approaches.

Assessment Methodologies for Preventing Failure: Service experience and environmental considerations Raj Mohan, 2000 *Nuclear Corrosion Science and Engineering* Damien Feron, 2012-02-21

Corrosion of nuclear materials, i.e. the interaction between these materials and their environments, is a major issue for plant safety as well as for operation and economic competitiveness. Understanding these corrosion mechanisms, the systems and materials they affect and the methods to accurately measure their incidence is of critical importance to the nuclear industry. Combining assessment techniques and analytical models into this understanding allows operators to predict the service life of corrosion-affected nuclear plant materials and to apply the most appropriate maintenance and mitigation options to ensure safe long-term operation. This book critically reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities. Initial sections introduce the complex field of nuclear corrosion science with detailed chapters on the different types of both aqueous and non-aqueous corrosion mechanisms and

the nuclear materials susceptible to attack from them This is complemented by reviews of monitoring and control methodologies as well as modelling and lifetime prediction approaches Given that corrosion is an applied science the final sections review corrosion issues across the range of current and next generation nuclear reactors and across such nuclear applications as fuel reprocessing facilities radioactive waste storage and geological disposal systems With its distinguished editor and international team of expert contributors Nuclear corrosion science and engineering is an invaluable reference for nuclear metallurgists materials scientists and engineers as well as nuclear facility operators regulators and consultants and researchers and academics in this field Comprehensively reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Chapters assess different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them Considers monitoring and control methodologies as well as modelling and lifetime prediction approaches

Understanding and Mitigating Ageing in Nuclear Power Plants Philip G Tipping,2010-10-26 Plant life management PLiM is a methodology focussed on the safety first management of nuclear power plants over their entire lifetime It incorporates and builds upon the usual periodic safety reviews and licence renewals as part of an overall framework designed to assist plant operators and regulators in assessing the operating conditions of a nuclear power plant and establishing the technical and economic requirements for safe long term operation Understanding and mitigating ageing in nuclear power plants critically reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures systems and

components SSC along with their relevant analysis and mitigation paths as well as reactor type specific PLiM practices. Obsolescence and other less obvious ageing related aspects in nuclear power plant operation are also examined in depth. Part one introduces the reader to the role of nuclear power in the global energy mix and the importance and relevance of plant life management for the safety regulation and economics of nuclear power plants. Key ageing degradation mechanisms and their effects in nuclear power plant systems structures and components are reviewed in part two along with routes taken to characterise and analyse the ageing of materials and to mitigate or eliminate ageing degradation effects. Part three reviews analysis monitoring and modelling techniques applicable to the study of nuclear power plant materials as well as the application of advanced systems structures and components in nuclear power plants. Finally Part IV reviews the particular ageing degradation issues plant designs and application of plant life management PLiM practices in a range of commercial nuclear reactor types. With its distinguished international team of contributors, *Understanding and mitigating ageing in nuclear power plants* is a standard reference for all nuclear plant designers, operators and nuclear safety and materials professionals and researchers. It introduces the reader to the role of nuclear power in the global energy mix, reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures, systems and components, SSC, examines topics including elimination of ageing effects, plant design and the application of plant life management PLiM practices in a range of commercial nuclear reactor types.

Nuclear Power in Stagnation David Toke, Geoffrey Chun-Fung Chen, Antony Froggatt, Richard Connolly, 2021-03-08
 This book studies the extent to which nuclear safety issues have contributed towards the stagnation of nuclear power development around the world and accounts for differences in safety regulations in different

countries In order to understand why nuclear development has not met widespread expectations this book focusses on six key countries with active nuclear power programmes the USA China France South Korea the UK and Russia The authors integrate cultural theory and theory of regulation and examine the links between pressures of cultural bias on regulatory outcomes and political pressures which have led to increased safety requirements and subsequent economic costs They discover that although nuclear safety is an important upward driver of costs in the nuclear power industry this is influenced by the inherent need to control potentially dangerous reactions rather than stricter nuclear safety standards The findings reveal that differences in the strictness of nuclear safety regulations between different countries can be understood by understanding differences in cultural contexts and the changes in this over time This book will be of great interest to students scholars and policymakers working on energy policy and regulation environmental politics and policy and environment and sustainability more generally
