Masters,2012-12-06 Degradation the chemical physical response of building and construction materials exposed to in service environments must be predicted prior to their installation in structures if materials are to be effectively selected used and maintained These assessments of materials degradation require that methods be available to aid prediction of service life The objectives of building materials science are a to characterize and categorize materials b to predict preferably in a mathematical sense material or component response including expected service life and c to make improvements in material response through improvements in design formulation processing or specification For building and construction materials continued progress has been made towards objective a but little progress has been made towards objectives b and c Of these the mathematical prediction of service life appears to be of greater importance because if general approaches or models having application to a wide range of building and construction materials can be identified then the categorization selection use and improvement of materials can proceed in a systematic manner Researchers in advanced technologies such as aerospace nuclear electronics and medicine have apparently been more successful than researchers in building and construction technology in responding to the need for reliable predictions of service life ASCE Combined Index American Society of Civil Engineers,1990 Indexes materials appearing in the Society's Journals Transactions Manuals and reports Special publications and Civil engineering *Construction Materials* Manuel Bustillo Revuelta,2021-03-02 Construction Materials is a comprehensive textbook covering all raw materials and products related to the construction processes and not only those applied to building structures The book is organized to help readers achieve competent knowledge about construction materials At the beginning of the book the author offers the general concepts definitions and standards adopted worldwide for these materials to be used along the book The central part of the text covers the primary construction materials required to manufacture concrete and mortars the most relevant construction materials in the last century Expressly concrete and mortar are treated in detail in dedicated chapters per component In addition the author addresses other relevant materials in construction such as ceramic materials metals and alloys bituminous materials and geosynthetic materials Finally since the construction industry is one of the largest single waste producing sector in the world
