Seventy Five Years In Ecology The British Ecological Society:

Seventy-five Years in Ecology John Sheail, 1987 **Toward a More Exact Ecology** Peter J. Grubb, John B.

Whittaker, 1989-08 This symposium volume is aimed at considering the most fruitful current approaches and technologies

Ecology in Education Monica Hale, 1995-09-28 Ecological and environmental education in schools and institutes of further and higher education has gained increasing importance in recent years both as an area of study in its own right and as a component of other disciplines There is now a requirement in many countries to include the environment in both formal and informal curricula This volume presents a long overdue account of the status progress and underlying concepts of ecological education It explores areas of recent development and debate in ecological and environmental education describes the evolution and development of environmental education in different countries and examines the importance and provision for fieldwork Case studies illustrate how ecological studies are undertaken in several culturally different settings This book will interest teachers and research workers in ecology environmental science and education **A Centennial History of**

the Ecological Society of America Frank N. Egerton, 2015-05-20 Celebrating its 100th anniversary in 2015 the Ecological Society of America ESA is the largest professional society devoted to the science of ecology A Centennial History of the Ecological Society of America tells the story of ESA s humble beginnings growing from approximately 100 founding members and a modest publication of a few pages to a m **Ecology Revisited** Astrid Schwarz, Kurt Jax, 2011-03-18 As concerns

about humankind s relationship with the environment move inexorably up the agenda this volume tells the story of the history of the concept of ecology itself and adds much to the historical and philosophical debate over this multifaceted discipline The text provides readers with an overview of the theoretical institutional and historical formation of ecological knowledge The varied local conditions of early ecology are considered in detail while epistemological problems that lie on the borders of ecology such as disunity and complexity are discussed The book traces the various phases of the history of the concept of ecology itself from its 19th century origins and antecedents through the emergence of the environmental movement in the later 20th century to the future and how ecology might be located in the environmental science framework of the 21st century The study of ecological phenomena has never been confined solely to the work of researchers who consider themselves ecologists It is rather a field of knowledge in which a plurality of practices concepts and theories are developed Thus there exist numerous disciplinary subdivisions and research programmes within the field the boundaries of which remain blurred As a consequence the deliberation to adequately identify the ecological field of knowledge its epistemic and institutional setting is still going on This will be of central importance not only in locating ecology in the frame of 21st century environmental sciences but also for a better understanding of how nature and culture are intertwined in debates about pressing problems such as climate change the protection of species diversity or the management of renewable resources *Green Development* Bill Adams, 2008-07-30 The concept of sustainability lies at the core of the challenge of

environment and development and the way governments business and environmental groups respond to it Green Development provides a clear and coherent analysis of sustainable development in both theory and practice This third edition retains the clear and powerful argument of previous editions but has been updated to reflect advances in ideas and changes in international policy Greater attention has been given to political ecology environmental risk and the environmental impacts of development This fully revised third edition discusses the origins of thinking about sustainability and sustainable development and its evolution to the present day the ideas that dominate mainstream sustainable development ecological modernization market environmentalism and environmental economics the nature and diversity of alternative ideas about sustainability that challenge business as usual thinking for example ecosocialism ecofeminism deep ecology and political ecology the dilemmas of sustainability in the context of dryland degradation deforestation biodiversity conservation dam construction and urban and industrial development the nature of policy choices about the environment and development strategies and between reformist and radical responses to the contemporary global dilemmas Green Development offers clear insights into the challenges of environmental sustainability and social and economic development It is unique in offering a synthesis of theoretical ideas on sustainability and in its coverage of the extensive literature on the environment and development around the world This book has proved its value to generations of students as an authoritative thought provoking and readable guide to the field of sustainable development

Nature Contested T. C. Smout, 2019-08-07 This work deals with four centuries of conflict over some of the most valued landscapes in Europe Based on a series of lectures given by the author at Oxford University in 1999 it combines social and cultural history with ecology and geography

Competition P.A. Keddy, 2012-12-06 Competition is one of the most important factors controlling the distribution and abundance of living creatures Sperm cells racing up reproductive tracts beetle larvae battling inside single seeds birds defending territories and trees interfering with the light available to neighbours are all engaged in competition for limited resources Along with predation and mutualism competition is one of the three major biological forces that assemble living communities Recent experimental work much of it only from the last few decades has enhanced human knowledge of the prevalence of competition in nature There are acacia trees that use ants to damage vines beetles that compete in arenas for access to dung balls tadpoles that apparently poison their neighbours birds that smash the eggs of potential competitors and plants that associate with fungi in order to increase access to soil resources While intended as an up to date reference work on the state of this branch of ecology the many non technical examples will make interesting reading for those with a general interest in nature Greatly expanded from the first prize winning edition there are entirely new chapters including one on resources and another on competition gradients in nature The author freely ranges across all major taxonomic groups in search of evidence The question of whether competition occurs is no longer useful the author maintains rather the challenge is to determine when and where each kind of competition is important in natural systems For this reason variants of

competition such as intensity asymmetry and hierarchies are singled out for particular attention The book concludes with the difficulties of finding general principles in complex ecological communities and illustrates the limitations on knowledge that arise out of the biased conduct of scientists themselves Competition can be found elsewhere in living systems other than ecological communities at sub microscopic scales in the interactions of enzymes and neural pathways and over large geographic areas in the spread of human populations and contrasting ideas about the world Human societies are therefore also examined for evidence of the kinds of competition found among other living organisms Using an array of historical examples including Biblical conflicts the use of noblemen's sons in the Crusades the Viking raids in Europe strategic bombing campaigns in the Second World War and ethnic battles of the Balkans the book illustrates how most of the aspects of competition illustrated with plants and animals can be extended to the interactions of human beings and their societies

The Sounding of the Whale D. Graham Burnett, 2013-09-24 Explores how humans view of whales changed from the nineteenth to the twentieth century looking at how the sea mammals were once viewed as monsters but evolved into something much gentler and more beautiful

Applied Population Biology S.K. Jain, L.W. Botsford, 2007-07-23 An increasing variety of biological problems involving resource management conservation and environmental quality have been dealt with using the principles of population biology defined to include population dynamics genetics and certain aspects of community ecology There appears to be a mixed record of successes and failures and almost no critical synthesis or reviews that have attempted to discuss the reasons and ways in which population biology with its remarkable theoretical as well as experimental advances could find more useful application in agriculture forestry fishery medicine and resource and environmental management This book provides examples of state of the art applications by a distinguished group of researchers in several fields The diversity of topics richly illustrates the scientific and economic breadth of their discussions as well as epistemological and comparative analyses by the authors and editors Several principles and common themes are emphasized and both strengths and potential sources of uncertainty in applications are discussed This volume will hopefully stimulate new interdisciplinary avenues of problem solving research

Nature and Nation Jeyamalar

Kathirithamby-Wells, 2005-10-31 *Nature and Nation* explores the relations between people and forests in Peninsular Malaysia where the planet's richest terrestrial eco system met head on with the fastest pace of economic transformation experienced in the tropical world It engages the interplay of history culture science economics and politics to provide a holistic interpretation of the continuing relevance of forests to state and society in the moist tropics Malaysia has long been singled out for emulation by developing nations an accolade contradicted in recent years by concerns over its capital rather than poverty driven forest depletion The Malaysian case supports the call for re appraisal of entrenched prescriptions for development that go beyond material needs Book cover

Against Extinction William (Bill) Adams, 2013-06-17 Conservation in the 21st century needs to be different and this book is a good indicator of why Bulletin of British Ecological Society

Against Extinction tells the history of wildlife conservation from its roots in the 19th century through the foundation of the Society for the Preservation of the Wild Fauna of the Empire in London in 1903 to the huge and diverse international movement of the present day. It vividly portrays conservation's legacy of big game hunting, the battles for the establishment of national parks, the global importance of species conservation, and debates over the sustainable use of and trade in wildlife. Bill Adams addresses the big questions and ideas that have driven conservation for the last 100 years: How can the diversity of life be maintained as human demands on the Earth expand seemingly without limit? How can preservation be reconciled with human rights and the development needs of the poor? Is conservation something that can be imposed by a knowledgeable elite, or is it something that should emerge naturally from people's free choices? These have never been easy questions, and they are as important in the 21st century as at any time in the past. The author takes us on a lively historical journey in search of the answers.

Picturing Ecology Damian Hughes, 2022-08-10 This book examines the role of photography and visual culture in the emergence of ecological science between 1895 and 1939.

Mycorrhizal Dynamics in Ecological Systems Michael F. Allen, 2022-04-14 Interdisciplinary volume on dynamic interactions between plants and fungi and how they scale up to land management and global change.

The Terrestrial Biosphere S.T. Trudgill, 2014-09-25 Terrestrial Biosphere tries to pose the questions which underlie the many-sided debate of how to respond to and influence change. How should we view nature? What do we do for the best? how should we act? what are we trying to achieve and what should we be guided by? In doing so, the book introduces and attempts to analyse not only scientific aspects of the debate but also cultural attitudes and values. The notions of ecosystem stability are now challenged, and it is also clear that ecosystems are renewable but not repeatable. It finds that prescriptive solutions based on current constructs may not be adequate. Feeling that analysis should lead to advocacy, the author believes that if we can't improve predictability, we have to increase adaptability, which means that ecological and social capacity building should be advocated. This is seen in terms of concepts, institutions, attitudes, and values which allow for a plurality of meanings and which can cope with surprise and unforeseen change and which also facilitates responses to change.

Geographers Geoffrey Martin, 2015-12-14 Geographers is an annual collection of studies on individuals who have made major contributions to the development of geography and geographical thought. Subjects are drawn from all periods and from all parts of the world and include famous names as well as those less well known, including explorers, independent thinkers, and scholars. Each paper describes the geographer's education, life, and work, and discusses their influence and spread of academic ideas. Each study includes a select bibliography and a brief chronology. The work includes a general index and a cumulative index of geographers listed in volumes published to date. Published under the auspices of the International Geographical Union.

Plant Microevolution and Conservation in Human-influenced Ecosystems David Briggs, 2009-11-26 With particular emphasis on plants, this thought-provoking text examines the implications of human influences on micro-evolutionary processes.

Decolonizing Nature William Adams, Martin

Mulligan,2012-04-27 British imperialism was almost unparalleled in its historical and geographical reach leaving a legacy of entrenched social transformation in nations and cultures in every part of the globe Colonial annexation and government were based on an all encompassing system that integrated and controlled political economic social and ethnic relations and required a similar annexation and control of natural resources and nature itself Colonial ideologies were expressed not only in the progressive exploitation of nature but also in the emerging discourses of conservation At the start of the 21st century the conservation of nature is of undiminished importance in post colonial societies yet the legacy of colonial thinking endures What should conservation look like today and what indeed whose ideas should it be based upon Decolonizing Nature explores the influence of the colonial legacy on contemporary conservation and on ideas about the relationships between people politics and nature in countries and cultures that were once part of the British Empire It locates the historical development of the theory and practice of conservation at both the periphery and the centre firmly within the context of this legacy and considers its significance today It highlights the present and future challenges to conservationists of contemporary global neo colonialism The contributors to this volume include both academics and conservation practitioners They provide wide ranging and insightful perspectives on the need for and practical ways to achieve new forms of informed ethical engagement between people and nature

National Park Science Jane Carruthers,2017-08-17 South Africa is renowned for its wildlife and environmental conservation in iconic national parks such as the Kruger one of the world s first formal protected areas However this is the first book to thoroughly analyse and explain the interesting and changing scientific research that has been accomplished in South Africa s national parks during the twentieth century Providing a fascinating and thorough historical narrative based on an extensive range of sources this text details the evolution of traditional natural history pursuits to modern conservation science in South Africa covering all research areas of conservation biology and all the national parks around the country It reveals the interaction between the international context government learning institutions and the public that has shaped the present conservation arena A complex story that will interest and inform not only those involved in conservation science of South Africa but worldwide

Landscape and Englishness David Matless,2016-09-15 As David Matless argues in this book updated in this accessible pocket edition landscape has been central to definitions of Englishness for centuries It is the aspect of English life where visions of the past present and future have met in debates over questions of national identity disputes over history and modernity and ideals of citizenship and the body Extensively illustrated Landscape and Englishness explores just how important the aesthetics of Britain s cities and countryside have been to its people Matless examines a wide range of material including topographical guides health manuals paintings poetry architectural polemics photography nature guides and novels Taking readers to the interwar period he explores how England negotiated the modern and traditional the urban and rural the progressive and preservationist in its decisions over how to develop the countryside re plan cities and support various cultures of leisure and citizenship Tracing

the role of landscape to Englishness from then up until the present day he shows how familiar notions of heritage in landscape are products of the immediate post war era and he unveils how the present always resonates with the past
