Ending Medicine's Chronic Dysfunction Lawrence L. Weed, Lincoln Weed, 2022-06-01 This book describes an overlooked solution to a long standing problem in health care The problem is an informational supply chain that is unnecessarily dependent on the minds of doctors for assembling patient data and medical knowledge in clinical decision making That supply chain function is more than the human mind can deliver Yet dependence on the mind is built into the traditional role of doctors who are educated and licensed to rely heavily on personal knowledge and judgment The culture of medicine has long been in denial of this problem even now that health information technology is increasingly used and even as artificial intelligence AI tools are emerging AI will play an important role but it is not a solution The solution instead begins with traditional software techniques designed to integrate novel functionality for clinical decision support and electronic health record EHR tools That functionality implements high standards of care for managing health information This book describes that functionality in some detail This description is intended in part to be a starting point for developers in the open source software community who have an opportunity to begin developing an integrated cloud based version of the tools described working with interested clinicians patients and others The tools grew out of work beginning more than six decades ago when this book's lead author deceased originated problem lists and structured notes in medical records The electronic tools he later developed led him to reconceive education and licensure for doctors and other health professionals which are also part of the solution this book describes

A Journey John S Campbell MD, 2006-06 All of us repeatedly grieve, heal and reinvent ourselves throughout our lives. Being aware of and active in this inherent aspect of our existence, I believe to be a less painful and more satisfying way of living than blindly struggling with or resisting these natural processes. John S Campbell M.D., author of *A Journey: Creative Grieving and Healing*. We all die, he seems to be telling us. What is far more important is that we live a meaningful life before that time comes. We all need to dig deep to find our own wisdom so we may understand what John is telling us. Nikki DeFrain M.S. and John DeFrain Ph.D. from their Foreword. *An Introduction to the U.S. Health Care System* Steven Jonas, 2003-04-15 Completely updated to reflect the continual changes in the U.S. health care delivery system, this bestselling text is a concise and balanced classic presenting the domestic health care system. It explains the five major components of the U.S. health care system: health care institutions, health care personnel, financing mechanisms, research and educational institutions that produce biomedical knowledge and health personnel, and firms producing health commodities such as pharmaceutical drugs and hospital equipment.

Informed Consent in Predictive Genetic Testing Jessica Minor, 2015-06-15 This important book proposes revising the current informed consent protocol for predictive genetic testing to reflect the trend toward patient-centered medicine. Emphasizing the predictive aspect of testing, the author analyzes the state of informed consent procedure in terms of three components: comprehension of risk assessment, disclosure to select appropriate treatment, and voluntariness. The book's revised model revisits these cornerstones, restructuring the consent process to allow for expanded comprehension, time-enhanced patient safety, greater patient involvement, and autonomy, and reduced chance of coercion by family or others. A comparison of the current and revised versions and case studies showing the new model in real-world applications add extra usefulness to this resource. Included in the coverage: The science behind PGT, Understanding genetic risks and probability, The history of informed consent, Revised model of informed consent, comprehension, disclosure, voluntariness, patient safety, Applications of the model in DTC and pleiotropic genetic testing, Implementation of the revised model and assessing its effectiveness. A milestone in the bioethics literature, *Informed Consent in Predictive Genetic Testing* will be of considerable interest to genetic counselors, medical and bioethicists, and public health professionals.

We Cry Out John DeFrain Ph.D., John S. Campbell, Susan Dahl MS, 2006 How does a developmental disability affect an individual throughout the course of life? What impact does the disability have on the individual's family? What strengths do families use to cope with these disabilities? What do they do that works? And what doesn't work? These are the kinds of questions we have been asking individuals and families in our research over the past 15 years. This book was written to report their stories and to honor these people who have shared their lives and their cries from the heart with us. It is both a positive book and a realistic book full of love and grief and tenderness and anger and kindness and sorrow and courage. It is as real as the people who gave us the gift of their lives.

On Loss and Losing Melvyn L. Fein, 2017-09-08 All people suffer instances of personal loss that cause distress. All too often, their discomfort is treated as a

medical issue requiring treatment usually through medication Melvyn L Fein argues for a broader understanding of loss and losing that offers another approach which he characterizes as resocialization Indeed how a person thinks feels and acts may all need to be reorganized if personal distress is to be overcome Fein urges that we distinguish between the loss of something we once possessed and losing something that never came to fruition Thus it is possible never to achieve vital social roles social statuses and or personal bonds despite our individual efforts While some of these losses are not necessarily problematic others are extremely painful Unfortunately rather than investigate the source of this discomfort distraught individuals frequently seek refuge in simplistic solutions As a consequence one of the reasons the medical model remains dominant is that the alternative is imperfectly understood Fein presents a compelling case for a sociological interpretation of personal distress Although he acknowledges that some personal suffering derives from biological sources and that mental illnesses can spill over to cause social dysfunctions he argues that it is important to recognize the social causes of human suffering In thereby recognizing the limitations of the human condition most of us can do better than blindly accept an inherited dedication to the medical model On Loss and Losing offers a legitimate option without denying the reality of human suffering
