Sex And Scientific Inquiry:

Sex and Scientific Inquiry Sandra G. Harding, Jean F. O'Barr, 1987 **Sex-Specific Reporting of Scientific Research** Board on Population Health and Public Health Practice, Institute of Medicine, 2012-01-27

The number of women participating in clinical trials has increased during the last two decades but women are still underrepresented in clinical trials in general. Some of the overall increase can be attributed to the greater number of women only trials of therapies for diseases that affect only women. Even when women are included in clinical trials the results are often not analyzed separately by sex. On August 30 2011 the Institute of Medicine IOM Board on Population Health and Public Health Practice hosted the workshop Sex Specific Reporting of Scientific Research. The workshop explored the need for sex specific reporting of scientific results potential barriers and unintended consequences of sex specific reporting of scientific results experiences of journals that have implemented sex specific requirements including the challenges and benefits of such editorial policies and steps to facilitate the reporting of sex specific results. Presenters and participants included current and former editors of scientific journals researchers and scientists and policymakers from government industry and nonprofit organizations. Presentations and discussions highlighted the importance to both women and men of having sex specific data the problems with sample size and financial constraints for conducting the research the appropriateness of sex specific analyses and the limitations of journal policies to change experimental designs. Sex Specific Reporting of Scientific Research summarizes the presentations and discussions by the expert panelists during the IOM workshop. The workshop's first session focused on why sex specific reporting is important. Panelists highlighted historical and current events that have hindered or helped to advance the study of women. In the next session panelists in academe discussed the challenges of collecting analyzing and reporting sex specific data from the researcher's perspective. That was followed by two panels of leading journal editors who shared their experiences in developing and implementing editorial policies and the implications of sex specific reporting policies for journals.

Handbook for Conducting Research on Human Sexuality Michael W. Wiederman, Bernard E. Whitley, Jr., 2012-12-06

Human sexuality researchers often find themselves faced with questions that entail conceptual methodological or ethical issues for which their professional training or prior experience may not have prepared them. The Psychology of Scientific Inquiry Aaro Toomela, 2019-11-05 This brief sets out on a course to distinguish three main kinds of thought that underlie scientific thinking Current science has not agreed on an understanding of what exactly the aim of science actually is how to understand scientific knowledge and how such knowledge can be achieved Furthermore no science today also explicitly admits the fact that knowledge can be constructed in different ways and therefore every scientist should be able to recognize the form of thought that undergirds their understanding of scientific theory In response to this this text seeks to answer the questions What is science What is scientific explanation What is causality and why it matters Science is a way to find new knowledge The way we think about the world constrains the aspects of it we can understand Scientists the author suggests should engage in a metacognitive perspective on scientific theory that reflects not only what exists in the world but also the way the scientist thinks about the world
