Third Sex, Third Gender Gilbert Herdt, 2020-10-27 Most modern discussions of the relationship of biological sex to gender presuppose that there are two genders, male and female, founded on the two biological sexes. But not all cultures share this essentialist assumption, and even Western societies have not always embraced it. Bringing together historical and anthropological studies, *Third Sex, Third Gender* challenges the usual emphasis on sexual dimorphism and reproduction, providing a unique perspective on the various forms of socialization of people who are neither male nor female. The existence of a third sex or gender enables us to understand how Byzantine palace eunuchs and Indian hijras met the criteria of special social roles that necessitated practices such as self-castration, and how intimate and forbidden desires were expressed among the Dutch Sodomites in the early modern period, the Sapphists of eighteenth-century England, or the so-called hermaphrodite homosexuals of nineteenth-century Europe and America. By contextualizing these practices and by allowing these bodies meanings and desires to emerge, *Third Sex, Third Gender* provides a new way to think about sex and gender systems that is crucial to contemporary debates within the social sciences

Sex and the Brain Gillian Einstein, 2007-10-19 A collection of foundational texts on the nature and behavioral consequences of sex differences in the brain, allowing readers to follow the development of a rapidly growing but contentious field and giving them the tools to analyze emerging scientific findings from many perspectives. This collection of foundational papers on sex differences in the brain traces the development of a much-invoked, fast-growing young field at the intersection of brain and behavior. The reader is introduced to the meaning and nature of sexual dimorphisms, the mechanisms and consequences of steroid hormone action, and the impact of the field on interpretations of sexuality and gender. Building on each other in point-counterpoint fashion, the papers tell a fascinating story of an emerging science working out its core assumptions. Experimental and theoretical papers woven together by editor's introductions open a window onto knowledge in the making and a vigorous debate between reductionist and pluralist interpreters. Five major sections include papers on conceptual and methodological background, central nervous system dimorphisms, mechanisms for creating dimorphisms, dimorphisms and cognition, and dimorphisms and identity. Each section builds from basic concepts to early experiments, from experimental models to humans, and from molecules to mind. Papers by such leading scholars as Arthur Arnold, Frank Beach, Anne Fausto-Sterling, Patricia Goldman-Rakic, Doreen Kimura, Simon LeVay, Bruce McEwen, Michael Merzenich, Bertram O'Malley, Geoffrey Raisman, and Dick Swaab

illustrate a rich blend of perspectives approaches methods and findings Sex and the Brain will show students how a scientific paper can be analyzed from many perspectives and supply them with critical tools for judging a rapidly emerging science in a contentious area

Changing Sex
Bernice L. Hausman, 1995 *Changing Sex* takes a bold new approach to the study of transsexualism in the twentieth century By addressing the significance of medical technology to the phenomenon of transsexualism Bernice L Hausman transforms current conceptions of transsexuality as a disorder of gender identity by showing how developments in medical knowledge and technology make possible the emergence of new subjectivities Hausman's inquiry into the development of endocrinology and plastic surgery shows how advances in medical knowledge were central to the establishment of the material and discursive conditions necessary to produce the demand for sex change that is to both make and think the transsexual She also retraces the hidden history of the concept of gender demonstrating that the semantic distinction between natural sex and social gender has its roots in the development of medical treatment practices for intersexuality the condition of having physical characteristics of both sexes in the 1950s Her research reveals the medical institution's desire to make heterosexual subjects out of intersexuals and indicates how gender operates semiotically to maintain heterosexuality as the norm of the human body In critically examining medical discourses popularizations of medical theories and transsexual autobiographies Hausman details the elaboration of gender narratives that not only support the emergence of transsexualism but also regulate the lives of all contemporary Western subjects *Changing Sex* will change the ways we think about the relation between sex and gender the body and sexual identity and medical technology and the idea of the human
