The Genetics and Biology of Sex Determination Derek J. Chadwick,Jamie A. Goode,2002-04-26 Nature employs a wide variety of sex determining mechanisms and it is only comparatively recently that the tools have become available for these to be explored at the cellular and molecular levels A major landmark was the discovery in 1990 of the SRY gene and the subsequent demonstration of its key role in triggering male sex determination in transgenic mice This book reviews and discusses our current understanding of the molecular genetic pathways of sex determination with special emphasis on vertebrates It features comparisons with other modes of sex determination consideration of the biology of sexual development and discussion of the evolution of sex determining mechanisms By bringing together an international and interdisciplinary group of experts who study many different aspects of the problem the book highlights much new and exciting work in this area and serves to identify and stimulate promising new research directions The 7 Sexes Elof Axel

Carlson,2013-02-12 Few of us know much about the biology of sex determination but what could be more interesting than to discover how we are shaped into males and females In this book Elof Carlson tells the incredible story of the difficult quest to understand how the body forms girls and boys Carlson s history takes us from antiquity to the present day to detail how each component of human reproduction and sexuality was identified and studied how this knowledge enlarged our understanding of sex determination and how it was employed to interpret such little understood aspects of human biology as the origin of intersex births Pathology and Epidemiology of Cancer Massimo Loda,Lorelei A. Mucci,Megan L. Mittelstadt,Mieke Van Hemelrijck,Maura Brid Cotter,2016-09-01 This book integrates the disciplines of cancer pathology and epidemiology to provide a synergistic and complementary approach to understanding the molecular mechanisms of cancer This book provides relevant information on the diagnostic prognostic and predictive molecular pathology of cancer Epidemiological studies including descriptive epidemiology risk factors and molecular mechanisms of disease inform on the etiology and progression of cancer The text concentrates on major cancers that are currently prevalent and those for which substantial molecular pathological and epidemiological data is available Each section is designed to provide an overview of that cancer type in terms of basic biology review the current epidemiological data surrounding that cancer type and provide information on common practices and challenges related to the molecular pathology of that cancer type Several relevant techniques in molecular pathology which facilitate diagnosis and treatment are also explored Pathology and Epidemiology of Cancer

H. F. Hunter,2003-05 The development and selection of ovarian follicles is one of the most active areas of contemporary reproductive research Relevant experimental work extends from laboratory rodents across a wide range of domestic species to human clinical studies especially as related to problems of fertility and in vitro fertilisation This 2003 volume provides comprehensive coverage of the field integrating research findings from animal and human studies and condensing the vast published literature into a meaningful and digestible physiological account which highlights the key role played by the oocyte in influencing all stages of follicular development **Darwinian Natural Right** Larry Arnhart,1998-01-01 This book shows how Darwinian biology supports an Aristotelian view of ethics as rooted in human nature Defending a conception of Darwinian natural right based on the claim that the good is the desirable the author argues that there are at least twenty natural desires that are universal to all human societies because they are based in human biology The satisfaction of these natural desires constitutes a universal standard for judging social practice as either fulfilling or frustrating human nature although prudence is required in judging what is best for particular circumstances The author studies the familial bonding of parents and children and the conjugal bonding of men and women as illustrating social behavior that conforms to Darwinian natural right He also studies slavery and psychopathy as illustrating social behavior that contradicts Darwinian natural right He argues as well that the natural moral sense does not require religious belief although such belief can sometimes reinforce the dictates of nature **Monoclonal Antibodies** James W. Goding,1996-02-26 Monoclonal Antibodies now have applications in virtually all areas of biology and medicine and much of the world's biotechnology industry has its foundations in the exploitation of this technology The Third Edition of this well established book meets the needs of both newcomers to the area

and experienced researchers by providing an integrated treatment of both the production and application of monoclonal antibodies As in previous editions detailed and critical accounts of the theory production purification fragmentation storage and radiolabelling of monoclonal antibodies are given along with descriptions of their use in antigen characterization affinity chromatography and immunofluorescence The present volume has been comprehensively updated to cover recent rapid advances particularly with respect to the applications of molecular biology the use of antibodies in cloning and heterologous expression of genes immunohistology and phage display libraries Since the previous edition there has been a growing trend towards the replacement of procedures using radioactive isotopes and the current edition incorporates these newer technologies The text is oriented towards problems solving and makes it easy to adapt each procedure to individual needs Extensive cross referencing a glossary and a comprehensive index make this book an essential reference This book will be vital both for laboratories already producing or using monoclonal antibodies and for workers in many disciplines who are contemplating their use Provides an integrated treatment of both the production and application of monoclonals in cell biology biochemistry and immunology Gives detailed and critical accounts of the theory production purification storage and relabelling of monoclonals and their use in antigen characterization affinity chromatography and immunofluorescence Comprehensively updated to cover the rapid advances that have occurred since the publication of the Second Edition
