**ABSTRACT:** Sex differences in social behavior are center stage in recent formulations of evolutionary psychology. Evolutionary psychology, with its emphasis on the long-term consequences of early adaptations, offers itself as an alternative meta-theory to mainstream social psychology, which emphasizes the importance of social structures in determining the existence and extent of social and cognitive sex differences. Using a range of examples, we argue that evolutionary psychology is open to criticism on several fronts: It does not (a) include a role for mediating and moderating variables or test predictions rigorously; (b) appreciate the importance of the difference between first- and second-order effects; (c) offer a truly interactionist theory; or (d) seriously consider the social implications of sex-based inequities. We also argue that social psychology has, in its turn, failed to appreciate the nonintuitive richness of some evolutionary hypotheses or that there is a role for evolutionary psychology in a genuinely interactionist theory. This paper restates the need for that perspective, and suggests how it may be achieved.

Evolutionary psychology has set its sights on the mind, challenging classical psychological explanations of everything from mate selection to cognition. The "new" theoretical perspective offers evolutionarily sophisticated adaptationist alternatives to current situational, sociocultural, and developmental explanations. Some of the affected subfields seem not to know what has hit them, while other subfields have easily absorbed and reconstructed models of evolution that best suit their subject matter, and still others have warily resisted the most seemingly relevant aspects of evolutionary psychology.

Perhaps nowhere is the resistance more evident than in social psychology, the broad subfield of psychology most explicitly dedicated to understanding social behavior and social differences. The stakes are high in this clash of perspectives, because what hangs in the balance are prospects for reinventing phenomena as diverse as developmental trajectories, personalities, interpersonal relationships, and social policies and institutions. If ancient adaptations are the foundations of contemporary personal dispositions and societal structures, then the likelihood of significantly changing the fortunes of social groups appears diminished. If, on the other hand, contextual and cultural conditions are the crucial causal forces, then efforts at reform seem more likely to succeed.

Our own position, as sketched in this commentary, is that evolutionary psychology and social psychology make separate and distinct contributions to the understanding of the complexities of social interaction. Each has something to offer and each leaves some ground uncovered. Evolutionary explanations of behavior are not inherently incompatible with sociocultural ones even though they have often been cast
