*Biotechnology* Steven P. McGiffen, 2005-03-20 Frankenfoods designer babies Dolly the Sheep and Raelian fantasists few subjects generate as much controversy and misinformation as biotechnology This book takes the reader behind the headlines to examine the new laws on genetic based technologies who's making them and why Steven P McGiffen offers a lucid analysis

of the real implications of biotechnology legislation in the US and the EU and contrasts it with approaches to agricultural and medical biotech in the rest of the world He argues that the EU and America are removing decision making power from the people and their elected representatives Biotechnology regulation is a local manifestation of a global process of transferring power from the people to corporations from poor countries to rich ones from the public to the private He shows that biotechnology demands effective and democratic international decision making procedures and that we are very far from achieving them This is an indispensable guide for activists and anyone who wants to know more about how to control biotech regulation and how to resist handing control of our future to corporations

investigates change in how control was secured contested allocated resisted justified and reshaped as biological knowledge was transformed Beyond illuminating genomics Reordering Life sheds new light on broader issues about secrecy and openness in science data access and ownership and the politics of research communities Drawing on real time interviews and observations made during the HGP Reordering Life describes the sociotechnical challenges and contentious issues that the genomics community faced throughout the project Hilgartner analyzes how laboratories control access to data biomaterials plans preliminary results and rumors compares conflicting visions of how to impose coordinating mechanisms examines the repeated destabilization and restabilization of the regimes governing genome databases and examines the fierce competition between the publicly funded HGP and the private company Celera Genomics The result is at once a path breaking study of a self consciously revolutionary science and a provocative analysis of how knowledge and control are reconfigured during transformative scientific change

*Through the Mirrors of Science* Francesco Coniglione,2013-05-02 Is the objective that the European Union set itself in 2000 that is to be the most competitive knowledge based society and economy by 2010 still realistic The momentous year has arrived but it is discouraging to note that very few steps have been made in the direction that was fixed What has gone wrong Were the philosophical epistemological and economic conditions adequate to achieve the desired result This book the result of a research project commissioned by the European Commission critically investigates the society of knowledge and the way in which the European Union has proceeded towards it examining first of all the premises and the contributions that the disciplines of Science and Technological Studies can provide In this way we have proposed innovative theoretical and epistemological bases for a multidisciplinary approach making use of the Modelling Approach to Science and therefore insisting on the

function that human sciences can have for a society of knowledge that hinges not so much on an industrialist scenario but a humanist one that eschews hyper specialization and instead privileges creativity flexibility imagination and innovation economy

**Mobilizing Mutations** Daniel Navon, 2019-09-20 With every passing year more and more people learn that they or their young or unborn child carries a genetic mutation But what does this mean for the way we understand a person

Today genetic mutations are being used to diagnose novel conditions like the XYY Fragile X NGLY1 mutation and 22q11.2 Deletion syndromes carving out rich new categories of human disease and difference. Daniel Navon calls this form of categorization genomic designation and in *Mobilizing Mutations* he shows how mutations and the social factors that surround them are reshaping human classification. Drawing on a wealth of fieldwork and historical material, Navon presents a sociological account of the ways genetic mutations have been mobilized and transformed in the sixty years since it became possible to see abnormal human genomes, providing a new vista onto the myriad ways contemporary genetic testing can transform people's lives. Taking us inside these shifting worlds of research and advocacy over the last half century, Navon reveals the ways in which knowledge about genetic mutations can redefine what it means to be ill, different, and ultimately human.
