Thinking like a Mall Steven Vogel, 2016-09-02 A provocative argument that environmental thinking would be better off if it dropped the concept of nature altogether and spoke instead of the built environment Environmentalism in theory and practice is concerned with protecting nature But if we have now reached the end of nature as Bill McKibben and other environmental thinkers have declared what is there left to protect In Thinking like a Mall Steven Vogel argues that environmental thinking would be better off if it dropped the concept of nature altogether and spoke instead of the environment that is the world that actually surrounds us which is always a built world the only one that we inhabit We need to think not so much like a mountain as Aldo Leopold urged as like a mall Shopping malls too are part of the environment and deserve as much serious consideration from environmental thinkers as do mountains Vogel argues provocatively that environmental philosophy in its ethics should no longer draw a distinction between the natural and the

artificial and in its politics should abandon the idea that something beyond human practices such as nature can serve as a standard determining what those practices ought to be The appeal to nature distinct from the built environment he contends may be not merely unhelpful to environmental thinking but in itself harmful to that thinking The question for environmental philosophy is not how can we save nature but rather what environment should we inhabit and what practices should we engage in to help build it

Theory and Practice in Aristotle's Natural Science David Ebrey,2015-06-11 Aristotle argued that in theory one could acquire knowledge of the natural world But he did not stop there he put his theories into practice This volume of new essays shows how Aristotle s natural science and philosophical theories shed light on one another The contributors engage with both biological and non biological scientific works and with a wide variety of theoretical works including Physics Generation and Corruption On the Soul and Posterior Analytics The essays focus on a number of themes including the sort of explanation provided by matter the relationship between matter teleology and necessity cosmic teleology how an organism s soul and faculties relate to its end how to define things such as sleep void and soul and the proper way to make scientific judgments The resulting volume offers a rich and integrated view of Aristotle s science and shows how it fits with his larger philosophical theories

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman,2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics

from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics, history, and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy.

This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, of proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover, from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersh, and Yuri Manin.

Barry Mazur, Gerhard Gade, University Professor, Harvard University

This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate.

John Stillwell, Emeritus Professor of Mathematics, University of San Francisco

Recipient of the 2005 Chauvenet Prize

Dedicating a volume to the memory of three mathematicians, Chandler Davis, Reuben Hersh, and Yuri Manin, who went out of their way to show to a broader audience that mathematics is more than what they might think is an excellent initiative. Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief. The result is a great source of potential inspiration.
