Bozinovski, 1998-11 Includes introduction and overview of the literature statement of the problem and study rationale research methods data collection and analysis assessing research quality constructing the social problem of self neglect defining elder abuse should self neglect be included setting the future agenda for self neglect explicating the key concepts processes and framework for understanding self neglect among the elderly threats to identity and personal control strategies resources and responses to identity and control threats current policy issues and recommendations Experimental Psychology, Cognition, and Human Aging Donald H. Kausler, 2012-12-06 This book is a major revision and extension of my earlier book *Experimental Psychology and Human Aging* which appeared in 1982 The intervening years have seen a remarkable expansion of psychological research on human aging especially on topics dealing with cognition They have also seen research on cognitive aging gain increasing importance within the mainstream of basic cognitive research As my lecture notes for my course in the psychology of aging grew so did my apprehension regarding the task ahead of me in revising the first edition The research explosion in cognitive aging forced several major changes in content from the first to the second edition Two chapters on learning and memory in the first edition were necessarily expanded to six chapters in the present edition Similarly the single prior chapter on perception and attention

became two chapters as did the single prior chapter on thinking. Another change from the first edition is in the addition of some review of the effects of abnormal aging on various cognitive processes particularly in regard to memory functioning. To keep the revision within reasonable length some sacrifices had to be made. The multiple chapters on methodology and theory in the first edition were condensed into the present single chapter. However the major topics from the first edition were retained and in fact added to by the inclusion of important topics and issues that emerged over the past eight years.

Methodological Issues in Aging Research Cindy S. Bergeman, Steven M. Boker, 2015-12-22. Methodological Issues in Aging Research is the first volume in the Notre Dame Series on Quantitative Methodology. This new series provides practical training on the latest quantitative methods used in social and behavioral research. Each volume features contributions from leading experts in state of the art techniques applicable to a selected substantive topic. The first series volume provides researchers with innovative techniques for the collection and analyses of data focusing on aging and lifespan development. The book addresses such techniques as structural equation modeling, latent class analysis, hierarchical linear growth curve modeling, dynamical systems analysis, multivariate Rasch models, survival analysis, multilevel modeling, and quantitative genetic methods. These new techniques provide better estimates of the direct effect of environmental or treatment effects and the dynamic pattern of genetic and environmental influences on adult development, more precise predictions of outcomes which in turn increase the diagnostic power of test instruments, the potential for developing new treatments that take advantage of the intrinsic dynamics of the course of a disease or age related change to enhance treatment. Methodological Issues in Aging Research appeals to advanced students and researchers in lifespan development, gerontology, health psychology, and other fields related to human development. It can be used as a main or supplemental text for advanced courses related to developmental research methods.
