Flavoprotein Protocols Steven K. Chapman, Graeme A. Reid, 2008-02-03 As a scientist with an interest in proteins you will at some time in your career isolate an enzyme that turns out to be yellow or perhaps you already have. Alternatively you may identify a polypeptide sequence that is related to known flavin containing proteins. This may or may not be your first encounter with flavoproteins. However even if you are an old hand in the field you may not have exploited the full range of experimental approaches applicable to the study of flavoproteins. We hope that *Flavoprotein Protocols* will encourage you to do so. In this volume we have sought to bring together a range of experimental methods of value to researchers with an interest in flavoproteins whether or not these researchers have experience in this area. A broad range of techniques from the everyday to the more specialized is described by scientists who are experts in their fields and who have extensive practical experience with flavoproteins. The wide range of approaches from wet chemistry to dry computation has as a consequence demanded a range of formats. Where appropriate particularly for analytical methods the protocol described is laid out in easy to follow steps. In other cases e.g. the more advanced spectroscopies and computational methods it is far more apt to describe the general approach and relevance of the methods. We hope this wide ranging approach will sow the seeds of many future collaborations between laboratories and further our knowledge and understanding of how flavoproteins work.

Non-Natural Amino Acids, 2009-07-24 By combining the tools of organic chemistry with those of physical biochemistry and cell biology *Non Natural Amino Acids* aims to provide fundamental insights into how proteins work within the context of complex biological systems of biomedical interest. The critically acclaimed laboratory standard for 40 years *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry. Since 1955 each volume has been eagerly awaited, frequently consulted and praised by researchers and reviewers alike. With more than 400 volumes published each *Methods in Enzymology* volume presents material that is relevant in today's labs, truly an essential publication for researchers in all fields of life sciences. Demonstrates how the tools and principles of chemistry combined with the molecules and processes of living cells can be combined to create molecules with new properties and functions found neither in nature nor in the test tube. Presents new insights into the molecular mechanisms of complex biological and chemical systems that can be gained by studying the structure and function of non natural molecules. Provides a one stop shop for tried and tested essential techniques eliminating the need to wade through untested or unreliable methods.

The Enzyme Reference Daniel L. Purich, R. Donald Allison, 2003-01-04 The aim of this work is to provide a fuller spectrum of information in a single source on enzyme catalyzed reactions than is currently available in any published reference work or as part of any Internet database. *The Enzyme Reference: A Comprehensive Guidebook to Enzyme Nomenclature, Reactions and Methods* includes 20 000 review articles and seminal research papers. Additionally it provides a novel treatment of so called ATPase and GTPase reactions to account for the noncovalent substrate-like and product-like states of molecular motors, elongation factors.
