D., 1988 **Computational Structural Analysis and Finite Element Methods** A. Kaveh, 2013-12-11 Graph theory gained initial prominence in science and engineering through its strong links with matrix algebra and computer science. Moreover, the structure of the mathematics is well suited to that of engineering problems in analysis and design. The methods of analysis in this book employ matrix algebra, graph theory, and meta heuristic algorithms which are ideally suited for modern computational mechanics. Efficient methods are presented that lead to highly sparse and banded structural matrices. The main features of the book include application of graph theory for efficient analysis, extension of the force method to finite element analysis, application of meta heuristic algorithms to ordering and decomposition, sparse matrix technology, efficient use of symmetry and regularity in the force method, and simultaneous analysis and design of structures.

Moldoveanu, Victor David, 2016-11-01 Selection of the HPLC Method in Chemical Analysis serves as a practical guide to users of high performance liquid chromatography and provides criteria for method selection, development, and validation. High performance liquid chromatography (HPLC) is the most common analytical technique currently practiced in chemistry. However, the process of finding the appropriate information for a particular analytical project requires significant effort and pre-existent knowledge in the field. Further sorting through the wealth of published data and literature takes both time and effort away from the critical aspects of HPLC method selection. For the first time, a systematic approach for sorting through the available information and reviewing critically the up-to-date progress in HPLC for selecting a specific analysis is available in a single book. Selection of the HPLC Method in Chemical Analysis is an inclusive go-to reference for
