spatial and environmental problems throughout our planet The book showcases a multidisciplinary panorama of modern regional science research and presents new insights by applying regional science approaches Regional Analysis and Policy Harry Coccossis,Yannis Psycharis,2008-08-02 Regional development is attracting the attention of policy makers and scientists again as regions urban centers and rural areas experience substantial pressures particularly in Europe as a consequence of globalization and geopolitical changes which lead to changes in spatial structures and dynamics This book is based on the contributions of Greek regional science research presented at the 2006 Congress of the European Regional Science Association at Volos Greece The contributions selected to be presented in this book address these changes offering a fresh look into regional development They provide an overview of regional development concerns from Greek regional scientists but the issues discussed pervade Greek particularities and stimulate thinking about regional science regional development and regional policy in the early twenty first century *History of Regional Science and the Regional Science Association International* Walter Isard,2012-12-06 It is difficult if not impossible to establish the point of time at which a new field of study starts to emerge While the date of formal organization of a society associated with the field can be precisely stated such timing says little about when and where the seeds for a field s development were planted Also such timing says little about the essential why for the development of a field and provides little understanding of the path that it traced It is clear that the emergence of the field of regional science like many other fields was dependent on a particular setting as well as the pattern of events and interaction of diverse personalities who became involved As best I can I shall attempt in this Part I of the History to unravel the where when and why questions in the development of Regional Science and the Regional Science Association International Further in the last section of this essay I shall briefly point up some potentialities for analytical advances in the field of regional science Also I shall note the opportunity for leadership by regional scientists in attacking global and regional development problems thereby to help formulate relevant policy In this way I hope to expose the potential for fruitful research by young scholars interested in entering the field *Community Analysis and Planning Techniques* Richard E. Klosterman,1990-04-17 This book introduces and describes four techniques which are at the core of professional practice and education The first technique curve fitting extrapolation projects an area s population employment or other characteristics by identifying and extending historical trends The second technique the cohort component technique projects an area s population by dividing it into a uniform set of population subgroups or cohorts and applying the three components of population change mortality fertility and migration to each cohort The third technique the economic base technique projects local economic change by dividing a local economy into basic and nonbasic sectors and by focusing analytic attention on the basic sector The fourth technique the shift share technique projects an area s economic activity by relating it to the activity of the state or nation in which it is located **A Broad View of Regional Science** Soushi Suzuki,Roberto Patuelli,2021-01-19 This book celebrates the life and work of Peter Nijkamp whose research provides a

strong focus on regional science His work follows a rigorous comprehensive approach centred around analytical modelling and methodological innovation This edited volume like Prof Nijkamp s research covers a wide range of topics in regional science analysed through multi criteria evaluation evaluation modelling econometrics and simulations among other methods These tools are applied to the analysis of society and culture tourism and information cities environment and sustainability Professor Nijkamp is one of the founders and the past president of the Regional Science Association International His work forms a valuable reference for researchers scholars policymakers and students in the field of regional science and other disciplines This volume timed to coincide with his 75th birthday celebrates Prof Nijkamp s great contributions to regional science He also promoted and participated in the education and development of young researchers not only in regional science but also in other fields supervising many Ph D students and hosting even more as guests in Amsterdam Contributors to this volume include Prof Nijkamp s former doctoral students and guest researchers as well as associates and colleagues

Principles of Regional Science Zheng Wang, 2017-10-17 This book summarizes the research findings in regarding a region as a rational and abstract concept and explores the principles of regional science Focusing on location theory spatial dynamics and regional evolution theory it stresses that the region as a scientific concept is an essential abstract of an economic entity of a place While it introduces a number of case studies the content is general and universal rather than specific Beginning with location theory the basis of regional science it explains how regions breed their own characteristics as economic entities against a background of place For example it discusses the location theory of the tourism industry and analyzes issues of facility location and R D industry location theory The second part of the book addresses interactions with the spatial dynamics including the dynamic mechanism of regions against a background of space Spatial dynamics which includes concepts from statistical physics provides insights into the dynamic mechanism of aggregation diffusion and industrial clustering in regional science as well as in geography and economics The book then describes regional dynamics as a development of spatial dynamics REGION is completely independent as a research object and is no longer part of spatial dynamics This book also discusses in detail regions as the dynamic characteristics of the economy or the basic characteristics of a certain place and examines the theory of regional evolution It argues that regions are evolution and irreversible features of development with path dependence which are the characteristics of a region that differ from general economic phenomena This book by Professor Zheng Wang is outstanding Its focus on Regional Science will open this area up to a wide variety of theoretical and applied researchers I recommend the work without reservations It covers critically important principles in the field and should be read and used by students faculty and applied researchers doing policy analysis I can see this as an important handbook and reference work as well as a textbook in the field Kingsley Haynes
