Methods on Physico-chemical Analysis of Fruits Bibhas Chandra Mazumdar, K. Majumder, 2021 **Methods on Physico-Chemical Analysis of Fruits**, 2021 *Methods on Physico Chemical Analysis of Fruits* Mazumdar, 2003

Analysis of human consumable fruits become necessary to the students and researchers of fruit science horticulture food technology plant biochemistry botany applied botany forestry ayurved pharmacetics and some other disciplines Necessity of such analysis is also felt in fruit preservation factories or training centres and to the agricultural marketing personnels in making grading of fruits It needs pointing out in this context that to assess the quality and nutritive status or compositional features of a fruit not only the chemical constituents but many physical components of it also become necessary to be determined There are in fact a number of books available which have presented the analytical procedure of plant materials and some of these have considered fruit analysis also as a part These titles have though presented much details and put up several procedure for a component methodology to assess physical components of fruits has hardly received adequate attention Therefore a practical manual on fruit analysis that would exclusively deal on procedural detail of both physical and chemical components of fruits cannot be set at defiance especially as a number of characteristic features specific to any species or variety of a fruit sometimes need to be critically considered in a fruit analytical procedure Keeping the above facts in view the present title has been attempted Many of the physical methods of analysis have in fact been devised by the principal author in his teaching and research career over three decades The title has before entering into chemical analytical part discussed some fundamental aspects of such analysis and the procedure appeared to be much convenient in estimating a component chemically has been presented

Science and Technology of Fruit Wine Production Maria R. Kosseva,V.K. Joshi,P.S. Panesar,2016-11-01 Science and Technology of Fruit Wine Production includes introductory chapters on the production of wine from fruits other than grapes including their composition chemistry role quality of raw material medicinal values quality factors bioreactor technology production optimization standardization preservation and evaluation of different wines specialty wines and brandies Wine and its related products have been consumed since ancient times not only for stimulatory and healthful properties but also as an important adjunct to the human diet by increasing satisfaction and contributing to the relaxation necessary for proper digestion and absorption of food Most wines are produced from grapes throughout the world however fruits other than grapes including apple plum peach pear berries cherries currants apricot and many others can also be profitably utilized in the production of wines The major problems in wine production however arise from the difficulty in extracting the sugar from the pulp of some of the fruits or finding that the juices obtained lack in the requisite sugar contents have higher acidity more anthocyanins or have poor fermentability The book demonstrates that the application of enzymes in juice extraction bioreactor technology and biological de acidification MLF bacteria or de acidifying yeast like schizosaccharomyces pombe and others in wine production from non grape fruits needs serious consideration Focuses on producing non grape wines highlighting their flavor taste and other quality attributes including their antioxidant properties Provides a single volume resource that consolidates the research findings and developed technology employed to make wines from non grape fruits Explores options for reducing post harvest losses which are especially high in developing countries Stimulates research and development efforts in non grape wines

Food Safety and Quality in the Global South Matthew Chidozie Ogwu, Sylvester Chibueze Izah, Nontuthuko Rosemary Ntuli, 2024-08-01

This book focuses on sustainable food systems in the Global South as highlighted by the United Nations Sustainable Development Goal 2, which seeks to end global hunger through food and nutrient security. It addresses the organoleptic properties of food that contribute to food quality as well as aspects of food safety such as the systematic handling, preparation, packaging, contamination, and storage within the food system to ensure food quality is maintained while preventing food-borne illnesses. The book assesses the state of food quality in the Global South and promotes the establishment of critical control points for food quality monitoring and maintaining adequate nutrient levels in food while keeping out organic, inorganic, and synthetic contaminants. The book also contains recommendations for corrective actions including consumer information systems and remedial health actions. The book systematically connects food safety and quality in the Global South with broader health and sustainable development implications, including the rising concern of non-communicable diseases. This comprehensive book delves into various aspects of food safety and quality in the Global South, offering insights into challenges, solutions, and emerging trends across multiple disciplines. This book serves as a valuable resource for academics, researchers, policymakers, and practitioners involved in food science, public health, and sustainable development. The diverse range of topics covered contributes to a holistic understanding of the complexities involved in ensuring safe and high-quality food in the unique context of the Global South.

Application of Analytical Chemistry to Foods and Food Technology Daniele Naviglio, Monica Gallo, 2021-02-22

The application of analytical chemistry to the food sector allows the determination of the chemical composition of foods and the properties of their constituents, contributing to the definition of their nutritional and commodity value. Furthermore, it is possible to study the chemical modifications that food constituents undergo as a result of the treatments they undergo in food technology. Food analysis therefore allows us not only to determine the quality of a product or its nutritional value but also to reveal adulterations and identify the presence of xenobiotic substances potentially harmful to

human health Furthermore some foods especially those of plant origin contain numerous substances with beneficial effects on health While these functional compounds can be obtained from a correct diet they can also be extracted from food matrices for the formulation of nutraceutical products or added to foods by technological or biotechnological means for the production of functional foods On the other hand the enormous growth of the food industry over the last 50 years has broadened the field of application of analytical chemistry to encompass not only food but also food technology which is fundamental for increasing the production of all types of food *Toxicology Research Projects Directory* ,1978
