Paleolimnology Andrew S. Cohen, 2003-05-29 This text written by a leading researcher in the field describes the origin and formation of lakes in order to give context to the question of how lacustrine deposits form It explains the process of sedimentation in lakes and the chemistry of those deposits and describes how the age of lake deposits are determined Additionally this book shows how different groups of fossils are used in interpreting the paleontological record of lakes In order to illustrate the more synthetic approaches to interpreting the history of lakes the author also discusses such special topics as lake level history lake evolution and the impact of environmental change on lakes

Biodiversity in Aquatic Systems and Environments Noboru Okuda, Katsutoshi Watanabe, Kayoko Fukumori, Shin-ichi Nakano, Takefumi Nakazawa, 2013-10-09 This book presents the latest topics in ecological and evolutionary research on aquatic biodiversity from bacteria to fishes with special reference to Lake Biwa an ancient lake in western Japan With a geological history of 4 million years Lake Biwa is the third oldest lake in the world It is considered a biodiversity hotspot where 1 769 aquatic species including 61 endemics are recorded providing a rare opportunity to study the evolutionary diversification of aquatic biota and its ecological consequences The first chapter introduces the evolutionary history of biodiversity especially of fish in

this lake In the second chapter some examples of trophic polymorphism in fish are described Fish are keystone predators in lake ecosystems and they can be a major driver for altering biological communities through their top down trophic cascading effects An excellent laboratory experiment is presented demonstrating that functional diversity of fish feeding morphology alters food web properties of plankton prey communities The third chapter focuses on aquatic microbes whose abundance and diversity may also be influenced by the diversity of fish through top down trophic cascades Aquatic microbes can have a strong impact on ecosystem functioning in lakes and in this chapter the latest molecular techniques used to examine genetic and functional diversity of microbial communities are introduced The final chapter presents theoretical frameworks for predicting how biodiversity has the potential to control the incidence and intensity of human induced regime shifts While respecting the precious nature of biodiversity in lakes it is essential to be aware that modern human activities have brought a crisis of biodiversity loss in lakes worldwide Throughout this book readers will learn why biodiversity must be conserved at all levels from genes to ecosystems **Annual Report** Stark County Historical Society, Canton, Ohio,1946 *Air Pollution*

near Wisconsin's Green Bay was dominated by hulking paper mills noxious industrial odors and widespread ecological damage Confronted by his lack of resources to force the politically powerful Paper Valley polluters to fix their mess Allen proceeds against all bureaucratic odds in building a 1 billion case against the paper company bosses Two small but vital players Allen along with journalist Susan Campbell were relentless in bringing the case to the public at the time They do so again in this book an act of radical transparency to uncover the intrigue that nearly blocked the cleanup behind the scenes at US Fish and Wildlife Wisconsin's Department of Natural Resources and the US Environmental Protection Agency In a rare and major environmental win the Fox River became the site of the largest polychlorinated biphenyls cleanup in history paid for by the paper companies rather than taxpayers to the tune of 1.3 billion and completed in 2020 This true story of struggle perseverance and success inspires hope for environmentalists who strive to restore natural landscapes The detailed account given in this book is meant to inspire and offer practical knowledge and solutions for those fighting similar opponents of environmental cleanup and restoration Allen and Campbell eloquently outline the problematic bureaucracy involved in environmental cleanup efforts and reveal tactics to compel corporate entities who would dodge accountability for decades worth of contamination

Concentration Camps on the Home Front John Howard, 2009-05-15 Without trial and without due process the United States government locked up nearly all of those citizens and longtime residents who were of Japanese descent during World War II Ten concentration camps were set up across the country to confine over 120 000 inmates Almost 20 000 of them were shipped to the only two camps in the segregated South Jerome and Rohwer in Arkansas locations that put them right in the heart of a much older long festering system of racist oppression The first history of these Arkansas camps *Concentration Camps on the Home Front* is an eye opening account of the inmates experiences and a searing examination of American imperialism and racist hysteria While the basic facts of Japanese American incarceration are well known John Howard's extensive research gives voice to those whose stories have been forgotten or ignored He highlights the roles of women first generation immigrants and those who forcefully resisted their incarceration by speaking out against dangerous working conditions and white racism In addition to this overlooked history of dissent Howard also exposes the government's aggressive campaign to Americanize the inmates and even convert them to Christianity After the war ended this movement culminated in the dispersal of the prisoners across the nation in a calculated effort to break up ethnic enclaves Howard's re-creation of life in the camps is powerful provocative and disturbing *Concentration Camps on the Home Front* rewrites a notorious chapter in American history a shameful story that nonetheless speaks to the strength of human resilience in the face of even the most grievous injustices

Functional Response of Aquatic Plants to Environmental Stressors Jun Xu, Qiang Yang, 2025-04-24 Aquatic plants such as floating macrophytes submerged macrophytes emergent macrophytes wetland plants and algae play vital roles in maintaining the health and functioning of aquatic ecosystems However increasing environmental stressors such as pollution climate change habitat alteration and nutrient imbalances are

impacting the functional responses of these plants Current progress is impeded by the complexity of aquatic ecosystems and the intricate interactions between different stressors Additionally the long term effects of these stressors on the resilience and adaptability of aquatic plant populations are not yet fully understood This Research Topic aims to explore the diverse and complex ways in which aquatic plants respond to various stressors shedding light on their adaptation mechanisms resilience and potential for ecosystem restoration We invite researchers ecologists and environmental scientists to contribute to this article collection focusing on the functional response of aquatic plants to environmental stressors

Border Lines Daniel Boyarin, 2010-11-24 The historical separation between Judaism and Christianity is often figured as a clearly defined break of a single entity into two separate religions Following this model there would have been one religion known as Judaism before the birth of Christ which then took on a hybrid identity Even before its subsequent division certain beliefs and practices of this composite would have been identifiable as Christian or Jewish In *Border Lines* however Daniel Boyarin makes a striking case for a very different way of thinking about the historical development that is the partition of Judaeo Christianity There were no characteristics or features that could be described as uniquely Jewish or Christian in late antiquity Boyarin argues Rather Jesus following Jews and Jews who did not follow Jesus lived on a cultural map in which beliefs such as that in a second divine being and practices such as keeping kosher or maintaining the Sabbath were widely and variably distributed The ultimate distinctions between Judaism and Christianity were imposed from above by border makers heresiologists anxious to construct a discrete identity for Christianity By defining some beliefs and practices as Christian and others as Jewish or heretical they moved ideas behaviors and people to one side or another of an artificial border and Boyarin significantly contends invented the very notion of religion

A Companion to Biblical Interpretation in Early Judaism Matthias Henze, 2012-01-09 Presents eighteen commissioned articles on biblical exegesis in early Judaism covering the period after the Hebrew Bible was written and before the beginning of rabbinic Judaism from publisher description
