Mi Primer Libro De Ciencias Science School:

Enseñanza y aprendizaje de las ciencias Wynne Harlen, 1989 Esta nueva edición revisada y puesta al día da cuenta de los profundos cambios habidos en la enseñanza de las ciencias en la educación primaria. Con un sólido fundamento teórico, Wynne HARLEN presenta una perspectiva práctica para facilitar la enseñanza de las ciencias basada en la convicción de que las decisiones curriculares deben fundarse en una visión coherente de la naturaleza del aprendizaje que se pretende. En esta revisión, la autora ha prestado atención al desarrollo de las ideas científicas del alumnado y a la función de las destrezas, procedimientos y actitudes en el aprendizaje significativo. Con un estilo de divulgación muy accesible y al mismo tiempo riguroso, HARLEN incorpora numerosos ejemplos de actividades prácticas sobre la forma en que el profesorado puede estimular a niños y niñas a comunicar sus propias ideas previas y sobre cómo confrontarlas con otras experiencias para facilitar procesos de aprendizaje. Dos nuevos capítulos se ocupan de los aspectos teóricos y prácticos de la evaluación de la enseñanza de las ciencias, así como del desarrollo de los registros correspondientes para facilitar una evaluación formativa. Estamos ante una edición completamente actualizada que constituye un recurso esencial y muy práctico para el profesorado de ciencias y para quienes trabajan en el ámbito de su formación y actualización.

History of Science in Latin America: The Construction of an Intellectual Field (20th century) María de la Paz Ramos-Lara, Luis Carlos Arboleda, 2024-12-23 This book provides a unique analysis of how the History of Science became institutionalized in Latin America during the last two decades of the 20th century. It examines the establishment of the first Latin American community in the History of Science and its connections with the international community and various international institutions such as the International Union of History and Philosophy of Science and Technology Division of History of Science and Technology IUHPST DHST. The authors are the same scholars who have been involved in several activities and strategies to professionalize and institutionalize this field in Latin America. They explore the impact of Western educational institutions and theoretical and methodological perspectives on the introduction of the History of Science in several Latin American nations. The book examines the two-way movement of European scholars to Latin America and Latin American students mainly to France. At that time, the organization of congresses in France, Spain, the United States, and other European countries encouraged the participation of Latin American historians of science. Notable events include the Science and Empires congress in Paris 1990, the Ciencia descubrimiento y mundo colonial conference in Madrid 1991, and the International Congresses of History of Science and Technology ICHST. The authors refer to seven Latin Americans who signed the Declaration of Bucharest 1981 to promote the history of sciences in their countries. This initiative led to the establishment of the Latin American Society for the History of Science and Technology LASHST in 1982 under the leadership of Juan José Saldaña, director of Quipu and Cuadernos de Quipu. With his leadership, existing national societies were reactivated and new ones were created, up to ten in four years: Argentina, Brazil, Colombia, Mexico, Chile, Peru, Venezuela, Costa Rica, Ecuador, and Cuba. This effort internationally legitimized Latin

American scientific practice culminating in celebrating the XXI ICHST in Mexico City in 2001 He founded the International Association for Scientific Cultural Diversity IASCUD and became the first Latin American to serve as Secretary General of IUHPST DHS from 2001 to 2005 Through his various actions and activities Salda a and the LASHST community were able to promote the institutionalization of the History of Science in Latin America This book pays a well deserved tribute to his efforts

Climate Change and Human Responses Gregory Monks, 2017-03-21 This book contributes to the current discussion on climate change by presenting selected studies on the ways in which past human groups responded to climatic and environmental change In particular the chapters show how these responses are seen in the animal remains that people left behind in their occupation sites Many of these bones represent food remains so the environments in which these animals lived can be identified and human use of those environments can be understood In the case of climatic change resulting in environmental change these animal remains can indicate that a change has occurred in climate environment and human adaptation and can also indicate the specific details of those changes
