Mibing Cat:

Exploring Cats: Their Behaviors and Human-Cat Interactions Lynette Arnason Hart, Benjamin Hart, Emma Kathryn Grigg, Leslie Ann Lyons, Dennis Clair Turner, 2023-12-27 Cats exceed dogs in their numbers as companion animals in the U S and much of Europe despite them not filling working roles In the past their prowess as mousers on farms sometimes made them essential but these days many cats lead leisurely lives in people s homes What accounts for them becoming such appreciated family members What are their behaviors that are so enticing Exactly how do they respond to us When are they preferred companion animals more than dogs What do we know about cultural differences in views about cats Their growing popularity and the relative paucity of data about owned cats living in homes emphasizes the importance of monitoring their welfare The anthrozoological research literature on companion animals includes extensive studies of dogs while contributing relatively few close looks at the special behaviors and traits of domestic cats that make them so desirable as companions We know little about the dynamics of our interactions with cats and the attachment shared with them which may differ in some ways for those we have with dogs Nor have we identified the specific contexts where cats are particularly or uniquely compatible How does the type of attachment affect and shape the bond relationship between human and cat How are cats as emotional support animals for people with special needs especially autism What new information do we have about the cognitive abilities of domestic cats and how these abilities shape cats behavior and relationships with humans How do early life experiences of cats influence their behavior as adults or their successful integration into human households Do cats fit best in certain residential settings or with specific types or ages of people This Research Topic provides an opportunity to update our understanding on the special qualities and behaviors of cats and to scrutinize our mutual interactions with these companions

How to Teach Relativity to Your Dog Chad Orzel, 2012-02-28 They say you can t teach an old dog new tricks But what about relativity Physics professor Chad Orzel and

his inquisitive canine companion Emmy tackle the concepts of general relativity in this irresistible introduction to Einstein's physics. Through armchair and sometimes passenger seat conversations with Emmy about the relative speeds of dog and cat motion or the logistics of squirrel chasing Orzel translates complex Einsteinian ideas: the slowing of time for a moving observer, the shrinking of moving objects, the effects of gravity on light and time, black holes, the Big Bang, and of course $E=mc^2$ into examples simple enough for a dog to understand. A lively romp through one of the great theories of modern physics. How to Teach Relativity to Your Dog will teach you everything you ever wanted to know about space, time, and anything else you might have slept through in high school physics class.

Alpha and Gamma Motor Systems R. Durbaba, M.H. Gladden, Anthony Taylor, 2012-12-06. The Sherrington School of Physiology at St Thomas Hospital provided a natural venue for four days of enthusiastic debate on Sherrington's Final Common Path: the alpha motoneurone and related matters. Sherrington himself held a lectureship at St Thomas just over a century ago. The occasion was a happy one. Most participants already knew each other; the topics were familiar; the discussion was vigorous and critical but without personal rancor. The program had set out to encourage debate with critiques both of the oral papers and the posters; their inclusion in the present volume helps to show where we are standing on rock rather than sand. In spite of a venerable history, some surprisingly simple matters remain controversial, such as the information content of the signals from the Golgi tendon organs. To those working on alpha and gamma motoneurons and their control, this volume provides an essential updating. Classical problems continue to be attacked on a broad front; advance is steady and continuous, a swelling tide rather than a sudden view of the summit. But in some sectors the difficulties are so great that to the outsider little might seem to change; the same battles continuing but even here the terms of debate change and consensus develops. Other branches of biology claim breakthrough upon breakthrough from the routine application of the new technologies, so we have to be the first to ask whether our classical approach to science can still be justified.
