technoeconomic analysis researchers are required to obtain data on the performance of new technologies that operate on a very small scale in order to subsequently design configurations on a commercial scale and estimate the costs of such expansions. The results of the developed models help identify possible market applications and provide an estimate of long term impacts. These methods together with other forms of decision analysis are very useful in the development and improvement of energy objectives since they will serve to compare different decisions evaluating their political and economic feasibility and providing guidance on potential financial and technological risks. *Code of Federal Regulations*, 2000 Special edition of the Federal Register containing a codification of documents of general applicability and future effect with ancillaries.
