Radiation Safety of Gamma and Electron Irradiation Facilities International Atomic Energy Agency, 1992 Since the 1950s gamma and electron beam facilities have been used for medical industrial and research purposes and their safety record has been very good With the publication of this book international harmonized safety guidance is available for all those involved in the design control and safe use of this type of irradiation facility Subject areas such as the classification of irradiators regulatory control and special procedures are covered and the safety philosophy for all types of irradiators is explained

Handbook on Radiation Environment, Volume 2 Dinesh Kumar Aswal, 2024-05-17 The handbook aims to provide a comprehensive resource for understanding ionizing radiation dosimetry catering to experts policymakers and interested readers The content of the handbook is focused on two main aspects of dose measurements external dosimetry and internal dosimetry The section on external dosimetry covers fundamental principles and discusses monitoring techniques across various environments such as nuclear industrial research and medical facilities It also covers advanced topics like Bayesian inference and retrospective dosimetry The internal dosimetry section explores radionuclide biokinetics simulation techniques dose evaluation and monitoring methods Specific scenarios such as radon inhalation and off normal conditions are addressed highlighting the importance of precision and intervention The handbook serves as a comprehensive resource for students academicians scientists engineers and policymakers interested in seeking an in depth knowledge of radiation dose measurements and its multi faceted aspects in protecting human health and the environment

Radiation Inactivation of Bioterrorism Agents L.G. Gázsó, C.C. Ponta, 2005-02-25 The use of and problems associated with biological weapons have been of concern to NATO and non NATO military organizations for many years Until recently most of the readily available literature addressed the military issues associated with the possible use of biological weapons on the battlefield the medical effects of the various agents and what was known about medical prophylaxis and treatments Information on other needed countermeasures such as decontamination or public health issues associated with exposure of civilian populations were largely overlooked This perspective changed dramatically after the contamination of the US Mail system with powdered anthrax spores Among the significant problems and defensive weaknesses that the anthrax attack revealed was the importance but lack of established industrial scale decontamination methods for large volumes of heterogeneous objects or for complex physical environments Ultimately these two microbial decontamination problems were solved in very different ways The contaminated mail was treated with ionizing radiation while the contaminated government buildings were treated with vapor gas phase chemicals Both the decontamination of the mail and establishing a process for prophylactic treatment of the mail were solved relatively quickly This was in large part due to the robust radiation biology and technical base derived from the industrial use of ionizing radiation Contributing to the speed of response was the fact that the attack occurred within the United States and in the home town of many of the technical experts and decision makers allowing

official response to be coordinated rapidly ***Ionizing Radiation and Polymers*** Jiri George Drobny, 2012-12-31 Radiation processing is widely employed in plastics engineering to enhance the physical properties of polymers such as chemical resistance surface properties mechanical and thermal properties particle size reduction melt properties material compatibility fire retardation etc Drobny introduces readers to the science of ionizing radiation and its effects on polymers and explores the technologies available and their current and emerging applications The resulting book is a valuable guide for a wide range of plastics engineers employing ionizing radiation for polymer treatment in a range of sectors including packaging aerospace defense medical devices and energy applications Radiation resistant polymers are also explored Unlock the potential of ionizing radiation in applications such as electron beam curing and laser joining Gain an understanding of the selection and safe use of radiation treatment equipment The only detailed guide to ionizing radiation written for the plastics engineering community ***Radioactivity in the Environment*** Vlado Valkovic, 2019-04-17 Radioactivity in the Environment Second Edition presents the facts on the presence of both natural and manmade radionuclides in the environment Sources of ionizing radiation that can lead to human exposure are discussed including natural sources nuclear explosions nuclear power generation the use of radiation in medical industrial and research purposes and radiation emitting consumer products In this thoroughly updated edition users will find new sections on developments in radioactive nuclides in nature and technologically modified exposure to natural radiation new threats by terrorist individuals groups and countries changes to the status of nuclear power in the world and more Additional new sections cover radioisotopes in geo prospecting and the oil industry the use of radiation in environmental protection detector types and detectors used for personal dosimetry the Dirty Bomb the Fukushima accident and North Korea testing sites and nuclear capabilities Includes details of analytical laboratory procedures for radioactivity measurement in different samples Features a new chapter on decontamination after radiation exposure Expands the discussion on nuclear fusion to cover ITER and other installations **Safety of Radiation Generators and Sealed Radioactive Sources** International Atomic Energy Agency, 2006 The objective of this Safety Guide is to assist Member States in implementing regulatory requirements for radiation sources that will ensure their safety To that end this publication provides guidance on infrastructure responsibilities for safety on methodologies for performing safety assessments and on specific design and operational measures that should be taken to ensure safety throughout the life cycle of radiation generators and sealed radioactive sources The safety measures recommended are also applicable to radioactive sources in nuclear facilities or radioactive waste disposal facilities while recognizing that these facilities should in any case provide a high standard of source safety **Irradiation of Food Commodities** Ioannis S. Arvanitoyannis, 2010-06-25 The irradiation of food is a low cost highly effective method of ensuring food safety and extending shelf life Public acceptance of irradiation despite its benefits however has been a significant challenge Irradiation of Food Commodities is the first holistic book that looks not only at the techniques application and legislation of this method but also addresses the concern of public

opinion Organized into logical themes and written by experts from industry academia and research this book will meet the needs of those working or considering the use of irradiation in their work Sections focus on legislation irradiation techniques and materials detection and risk assessment application of irradiation on food and consumer opinion Insights into regulations from a variety of countries provides important information on government strategies Extensive coverage of applications from animal food to food for human consumption and disinfection explores the various potential application opportunities available for consideration Addresses risk assessment key to governmental and more importantly consumer acceptance All topics in one volume for the first time provides complete vision of the technology Nutritional Care of the Patient with Gastrointestinal Disease Alan L Buchman,2015-08-06 This evidence based book serves as a clinical manual as well as a reference guide for the diagnosis and management of common nutritional issues in relation to gastrointestinal disease Chapters cover nutrition assessment macro and micronutrient absorption malabsorption food allergies prebiotics and dietary fiber probiotics and intestinal microflora nutrition and GI cancer nutritional management of reflux nutrition in IBS and IBD nutrition in acute and chronic pancreatitis enteral nutrition parenteral nutrition medical and endoscopic therapy of obesity surgical therapy of obesity pharmacologic nutrition and nutritional counseling **Technologies for Sustainable Rural Development: Having Potential of Socio-Economic Upliftment (TSRD-2014)** Jai Parkash Shukla,2014-07-15 Rural development technologies are critically important for the country to improve the quality of life in villages In this context held a National Workshop on Technologies for Sustainable Rural Development Having Potential of Socio Economic Upliftment TSRD 2014 to frame a road map for the future which will lead to the development of rural areas and improve the socio economic condition of rural masses through the intervention of Science and Technology *Current Catalog* National Library of Medicine (U.S.),1993 First multi year cumulation covers six years 1965 70 *Radiation Sterilization for Health Care Products* Barry P. Fairand,2001-09-26 Focusing on how the radiation process works and how it is applied in sterilizing medical devices and healthcare products this book provides the latest developments in radiation technology in the form of e beams gamma rays and x rays It covers the design and operation of irradiators as well as factors that affect cost and efficiency It offers readers practical insights on this critical step in healthcare product manufacturing its current uses and its related cost concerns Bringing all the information into one source Radiation Sterilization for Health Care Products is a uniquely comprehensive resource *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1993

Lessons Learned from Accidents in Industrial Irradiation Facilities International Atomic Energy Agency,1996 The purpose of this publication is to present the results of a review of accidents in industrial radiography which have either been reported to regulatory authorities or to professional associations or been published in scientific journals Use of ionizing radiation in medicine industry and research for technical development continues to increase throughout the world Although this industry has a good safety record there is a potential for accidents with serious consequences to human health because

of the high dose rates produced by these sources Five fatal accidents occurred between 1975 and 1994 Such accidents have prompted the present review carried out by a team of manufacturers regulatory authorities and operating organizations Having closely looked at the circumstances of each accident the apparent deficiencies in design safety and regulatory systems and personnel performance the team made a number of recommendations The findings of extensive research pertaining to the lessons that can be learned from irradiation accidents are presented Nuclear and Radiological Safety 1990-2001 International Atomic Energy Agency.
