Aesthetics and the Environment Allen Carlson,2005-08-08 Traditional aesthetics is often associated with the appreciation of art Allen Carlson shows how much of our aesthetic experience does not encompass art but nature in our response to sunsets mountains or horizons or more mundane surroundings like gardens or the view from our window He argues that knowledge of what it is we are appreciating is essential to having an appropriate aesthetic experience and that scientific understanding of nature can enhance our appreciation of it rather than denigrate it *Resourcing an Agroecological Urbanism* Chiara Tornaghi,Michiel Dehaene,2021-03-07 Foregrounding an innovative and radical perspective on food planning this book makes the case for an agroecological urbanism in which food is a key component in the reinvention of new and just social arrangements and ecological practices Building on state of the art and participatory research on farming urbanism food policy and advocacy in the field of food system transformation this book changes the way food planning has been conceptualised to date and invites the reader to fully embrace the transformative potential of an agroecological perspective Bringing in dialogue from both the rural and urban the producer and consumer this book challenges conventional approaches that see them as separate spheres whose problems can only be solved by a reconnection Instead it argues for moving away from a food in the city approach towards an urbanism perspective in which the economic and spatial processes that currently drive urbanisation will be unpacked and dissected and new strategies for changing those processes into more equal and just ones are put forward Drawing on the nascent field of urban political agroecology this text brings together i theoretical re conceptualisations of urbanism in relation to food planning and the emergence of new agrarian questions ii critical analysis of experimental methodologies and performing arts for public dialogue reflexivity and food sovereignty research iii experiences of resourceful land management including urban land use and land tenure change and iv theoretical and practical exploration of post capitalist economics that bring consumers and producers together to make the case for an agroecological urbanism Aimed at advanced students and academics in agroecology sustainable food planning urban geography urban planning and critical food studies this book will also be of interest to professionals and activists working with food systems in both the Global North and the Global South Agroecology Stephen R.

The Social Risks of Agriculture Ronald C. Wimberley, Craig K. Harris, Joseph J. Molnar, Terry J. Tomazic, 2002-08-30 In a vast society where environmentally conscious nonfarming voters and consumers have grown to greatly outnumber those directly engaged in agriculture what happens in agriculture becomes increasingly subject to control by the general society as policies and laws cater to constituents and consumers This book provides an overview of how Americans perceive and value farmers and examines public opinion with regard to a number of agricultural issues Based on analysis of national survey data the authors offer an empirically based discussion and interpretation of those views and perceptions that help to shape policy and social sustainability This unique

collection illustrates that in addition to its natural biological and economic risks agriculture has social risks that reverberate through all levels of society As the general population grows and the number of farms and farmers diminishes the weight of public opinion becomes more important in the policy arena of society as well as in the market demands for food and fiber grown in safe and favorable environmental conditions Setting the stage with a consideration of the larger society's interests in agricultural issues and of social and agricultural interdependence the contributors cover a range of topics and issues affecting agriculture at the end of the 20th century Chapters examine public perceptions of government's role in farming support for an environmentally friendly agricultural system views on pesticides and chemicals in foods consumer attitudes on food safety threats to clean drinking water concerns over farm animal welfare and the basic agrarian ethic of American society The book concludes with a look to the future of the social risks of agriculture in the 21st century
