**Joe Pawsey and the Founding of Australian Radio Astronomy** W. M. Goss, Claire Hooker, Ronald D.

Ekers, 2023-01-10 This open access book is a biography of Joseph L Pawsey It examines not only his life but the birth and growth of the field of radio astronomy and the state of science itself in twentieth century Australia The book explains how an isolated continent with limited resources grew to be one of the leaders in the study of radio astronomy and the design of instruments to do so Pawsey made a name for himself in the international astronomy community within a decade after WWII and coined the term radio astronomy His most valuable talent was his ability to recruit and support bright young scientists who became the technical and methodological innovators of the era building new telescopes from the Mills Cross and Chris Christiansen Cross to the Parkes radio telescope The development of aperture synthesis and the controversy surrounding the cosmological interpretation of the first major survey which resulted in the Sydney research group s disagreements with Nobel laureate Martin Ryle play major roles in this story This book also shows the connections among prominent astronomers like Oort Minkowski Baade Struve famous scientists in the UK such as J A Ratcliffe Edward Appleton and Henry Tizard and the engineers and physicists in Australia who helped develop the field of radio astronomy Pawsey was appointed the second Director of the National Radio Astronomy Observatory Green Bank West Virginia in October 1961 he died in Sydney at the age of 54 in late November 1962 Upper level students scientists and historians of astronomy and technology will find the information much of it from primary sources relevant to any study of Joseph L Pawsey or radio astronomy This open access book includes a Foreword by Woodruff T Sullivan II

This Book Introduces The Subject Of Astrophysics To Honours And Post Graduate Students Of Physics Without The Necessity Of Their Being Familiar With All The Practical Details Of Modern Astronomical Techniques Of Observation And Deduction Of Data The Emphasis Is On Showing How An Application Of The Commonly Known Laws Of Physics Gives Us Important Information About The Properties Of Celestial Objects And Phenomena *Big Data in Astronomy* Linghe Kong, Tian Huang, Yongxin Zhu, Shenghua Yu, 2020-06-13 Big Data in Radio Astronomy Scientific Data Processing for Advanced Radio Telescopes provides the latest research developments in big data methods and techniques for radio astronomy Providing examples from such projects as the Square Kilometer Array SKA the world s largest radio telescope that generates over an Exabyte of data every day the book offers solutions for coping with the challenges and opportunities presented by the exponential growth of astronomical data Presenting state of the art results and research this book is a timely reference for both practitioners and researchers working in radio astronomy as well as students looking for a basic understanding of big data in astronomy Bridges the gap between radio astronomy and computer science Includes coverage of the observation

lifecycle as well as data collection processing and analysis Presents state of the art research and techniques in big data related to radio astronomy Utilizes real world examples such as Square Kilometer Array SKA and Five hundred meter Aperture Spherical radio Telescope FAST     The New Cosmos. A. Unsöld,2013-11-09 This book may serve to present the modern view of the universe to a large number of readers whose over full professional commitments leave them no time for the study of larger monographs Such a book should not be too compendious Accordingly the author has been at pains to allow the leading ideas of the various domains of astronomical investigation to stand out plainly in their scientific and historical settings the introductory chapters of the three parts of the book in the framework of historical surveys should assist the general review With that in mind the title was chosen following Alexander von Humboldt's well known book *Kosmos Entwurf einer physischen Weltbeschreibung* 1827 1859 On the other hand particular results which admittedly first lend colour to the picture are often simply stated without attempting any thorough justification The reader seeking further information will find guidance in the Bibliography This makes no pretensions to completeness or historical balance References in the text or in captions for the figures by quoting authors and years make it possible for the reader to trace the relevant publications through the standard abstracting journals I wish to thank my colleagues V WEIDEMANN E RICHTER and B BASCHEK for their critical reading of the book and for much helpful counsel and H HOLWEGGER for his tireless collaboration with the proofs Similarly my thanks are due to Miss ANTJE WAGNER for the careful preparation of the typescript     **Transactions of the International Astronomical Union** International Astronomical Union,1962
