Radiobiology and Radiation Hormesis Charles L. Sanders, 2017-08-08 This book presents new information on radiobiology that more clearly refutes the linear no threshold LNT assumption and supports radiation hormesis Fresh light is cast on the mechanisms of radiation hormesis and the potential benefits of low dose ionizing radiation in preventing and treating a wide variety of inflammatory and proliferative diseases It is proposed that these effects may derive from cellular communication via electromagnetic waves directed by DNA with each cell acting as a quantum computer Readers will also find close analysis of the negative impacts of radiophobia on many aspects of modern life including attitudes to imaging technologies licensing of nuclear power reactors and preparedness for survival of nuclear war The book will be of interest to researchers and scientists in radiobiology radiation protection health physics medical physics and radiology Specifically it will provide medical physicians radiation oncologists radiation epidemiologists gerontologists cell biologists toxicologists and nuclear engineers with a wide range of interesting facts and enlightening novel perspectives

Biological Aspects of Radiation Protection T. Sugahara, O. Hug, 1971 In the maintenance and development of sound standards of radiation protection many types of enquiry are important These range from the purely technical examination of the ways in which exposure may occur or radionuclides may enter the body under existing or new conditions of occupational activity to the most fundamental studies of the interaction of high energy particulate radiation with matter or the metabolic

localisation and kinetics of unfamiliar radionuclides One of the most important and most basic problems however is to establish a quantitative estimate for the frequency with which various types of injury would be induced in man following exposure to low doses of radiation delivered at low dose rates No sound limits can be proposed for appropriately safe levels of occupational or population exposure unless the associated hazard or its maximum likely value can be at least approximately assessed It is one of the most important tasks of those concerned with radiation protection that these criteria should be kept under constant review in the light of developing knowledge and that the fields in which further information is needed should be defined and described

Instructor's Manual, Practical Radiation Protection and Applied Radiobiology Steven B. Dowd, 1994 The latest edition of this text presents both theory and clinical practice of radiation protection and radiobiology from X ray production and nuclear medicine to radiation therapy Updated to reflect recent regulations this text serves as a complete review for national certification exams as well as a useful review for clinical practice
