Railways And Energy:

Railways and Energy Liviu Leonard Alston, 1984 A railway vehicle requires substantially less propulsive energy than a road vehicle of the same weight moving at the same speed However other factors favor road transport As a result the ratio of energy consumption by the two modes varies widely depending on service conditions including vehicle characteristics Railways have a substantial energy advantage for large volumes of bulk commodities Part I of this paper reviews measures for increasing the railways energy efficiency and shows that significant gains may be achieved through operational improvements Part II discusses railway electrification Its economic viability depends on the opportunity cost of capital the costs of diesel fuel and of electric power the traffic mix and the nature of the terrain as well as on the capital and maintenance costs of railway works and equipment needed with electric and with diesel traction A series of examples are given and an analysis suitable for prefeasibility studies is presented for estimating the traffic at which electrification becomes economically viable

High-Speed Railways and New Structure of Socio-economic Development in China Xiaoyan Lin, 2023-06-14 This book systematically expounds the significance of the high speed railway in China s regional economic and social development It also contains a large number of case discussions so that readers can fully understand the development of China s high speed railway and its role in promoting China s economy The purpose of this book is to determine whether high speed railway has important political and strategic significance for China s development the inherent relationship and mechanism of the high speed railway together with economic and social development and how to achieve the high speed rail and economic and social coordination as well as sustainable development

Energy-Efficient Train Operation Shuai Su, Zhongbei Tian, Rob M. P. Goverde, 2023-07-03 This book is closely related to the energy conservation problem of rail transport systems focusing on reducing the energy consumption of train operation The system process of train operation is analyzed and the relationship between train operation and energy consumption is introduced The fundamental theories modelling and application of technologies for energy efficient train driving are presented discussing timely topics such as energy efficient train control and timetabling integrated timetabling and regenerative braking and maximizing regenerated energy usage with energy storage systems In addition the modelling and application of a traction power simulation platform is introduced to calculate the detailed energy flow over a railway network The book is enriched with a set of practical examples to illustrate the performance of the proposed methods in improving energy efficiency of both urban and long distance trains Overall the book provides a timely guide to professionals in the railway industry and to researchers and graduate students in transport electrical and control engineering
