The Microbial Regulation of Global Biogeochemical Cycles Johannes Rousk,Per Bengtson,2014-10-17 Global biogeochemical cycles of carbon and nutrients are increasingly affected by human activities So far modeling has been central for our understanding of how this will affect ecosystem functioning and the biogeochemical cycling of carbon and nutrients These models have been forced to adopt a reductive approach built on the flow of carbon and nutrients between pools that are difficult or even impossible to verify with empirical evidence Furthermore while some of these models include the response in physiology ecology and biogeography of primary producers to environmental change the microbial part of the ecosystem is generally poorly represented or lacking altogether The principal pool of carbon and nutrients in soil is the organic matter The turnover of this reservoir is governed by microorganisms that act as catalytic converters of environmental conditions into biogeochemical cycling of carbon and nutrients The dependency of this conversion activity on individual environmental conditions such as pH moisture and temperature has been frequently studied On the contrary only rarely have the microorganisms involved in carrying out the processes been identified and one of the biggest challenges for advancing our understanding of biogeochemical processes is to identify the microorganisms carrying out a specific set of metabolic processes and how they partition their carbon and nutrient use We also need to identify the factors governing these activities and if they result in feedback mechanisms that alter the growth activity and interaction between primary producers and microorganisms By determining how different groups of microorganisms respond to individual environmental conditions by allocating carbon and nutrients to production of biomass CO₂ and other products a mechanistic as well as quantitative understanding of formation and decomposition of organic matter and the production and consumption of greenhouse gases can be achieved In this Research Topic supported by the Swedish research councils programme Biodiversity and Ecosystem Services in a Changing Landscape BECC we intend to promote this alternative framework to address how cycling of carbon and nutrients will be altered in a changing environment from the first principle mechanisms that drive them namely the ecology physiology and biogeography of microorganisms and on up to emerging global

biogeochemical patterns This novel and unconventional approach has the potential to generate fresh insights that can open up new horizons and stimulate rapid conceptual development in our basic understanding of the regulating factors for global biogeochemical cycles The vision for the research topic is to facilitate such progress by bringing together leading scientists as proponents of several disciplines By bridging Microbial Ecology and Biogeochemistry connecting microbial activities at the micro scale to carbon fluxes at the ecosystem scale and linking above and belowground ecosystem functioning we can leap forward from the current understanding of the global biogeochemical cycles

Drugs for the Control of Epilepsy Carl L. Faingold, Gerhard H. Fromm, 2019-06-04 Originally published in 1991 This book brings together the ideas of an international group of experts on clinical and experimental epilepsy These authors consider how antiepileptic drugs may act on elements of neuronal networks to reduce seizure incidence and severity The book addresses such topics as the four general classes of anticonvulsant drug mechanisms major epilepsy models the proposed mechanisms of action of major antiepileptic drugs and the clinical use of antiepileptic drugs in the treatment of various forms of human epilepsy This volume is special for its focus on the neuronal network approach to epilepsy as well as for its comprehensive review and integration of human and animal data Neurologists pharmacologists psychiatrists and other investigators actively working on epilepsy research will find this book to be a useful thought provoking reference volume

Physical Chemistry for the Life Sciences Peter William Atkins, R. George Ratcliffe, Julio de Paula, Mark Wormald, 2023 This text provides a balanced presentation of the concepts of physical chemistry and their applications to biology and biochemistry Written to straddle the worlds of physical chemistry and the life sciences it shows students how the tools of physical chemistry can elucidate biological questions

Metabolome Analysis Silas G. Villas-Boas, Jens Nielsen, Jorn Smedsgaard, Michael A. E. Hansen, Ute Roessner-Tunali, 2007-02-16 Providing information on the main approaches for the analysis of metabolites this textbook Covers basic methodologies in sample preparation and separation techniques as well as the most recent techniques of mass spectrometry Differentiates between primary and secondary metabolites Includes four chapters discussing successful metabolome studies of different organisms Highlights the analytical challenges of studying metabolites Illustrates applications of metabolome analysis through the use of case studies

A Systems Biology Approach to Advancing Adverse Outcome Pathways for Risk Assessment Natàlia Garcia-Reyero, Cheryl A. Murphy, 2018-02-24 Social pressure to minimize the use of animal testing the ever increasing concern on animal welfare and the need for more human relevant and more predictive toxicity tests are some of the drivers for new approaches to chemical screening This book focuses on The Adverse Outcome Pathway an analytical construct that describes a sequential chain of causally linked events at different levels of biological organization that lead to an adverse health or ecotoxicological effect While past efforts have focused on toxicological pathway based vision for human and ecological health assessment relying on in vitro systems and predictive models The Adverse Outcome Pathway framework provides a simplified and structured way to organize toxicological information Within the book a systems biology approach

supplies the tools to infer link and quantify the molecular initiating events and the key events and key event relationships leading to adverse outcomes The advancement of these tools is crucial for the successful implementation of AOPs for regulatory purposes
